Intelligent Monitoring Report: May 2015

Intelligent Monitoring is a tool which assesses risk within care services. It has been developed to support CQC's regulatory function and purpose of ensuring that health and social care services provide people with safe, effective, compassionate, and high-quality care. Intelligent Monitoring highlights those areas of care to be followed up through inspections and other engagements.

What does this report contain?

Intelligent Monitoring is built on a set of indicators for monitoring risks to the quality of care. These indicators measure outcomes that have a high impact on service users and relate to the five key questions that are asked during inspections, namely: are services safe, effective, caring, responsive, and well-led?

This report presents the results of Intelligent Monitoring for Bolton NHS Foundation Trust.

A number of tests are used to determine the levels of risk for each indicator. The tests include Cumulative Sums (CUSUM) and z-scoring techniques which are applied based on the judgement of which is the most appropriate test for each indicator. Where an indicator has 'no evidence of risk' this refers to where the statistical analysis has not deemed the result to be outside the confidence limits or pre-determined threshold.

For some indicators the thresholds are determined by a rules-based approach, for example concerns raised by staff to CQC (and validated by CQC) are always flagged in the model.

From these analyses, each trust is assigned to one of six risk bands by producing a weighted sum of the indicators that have been identified as 'risk' or 'elevated risk', and comparing that score with all of the indicators which apply to that trust. In this process, the weighting refers to 'elevated risks' being scored as double the value of 'risks'.

Priority bands are not assigned to those trusts that have had inspection reports published in the last twelve months. For these trusts, the priority band is displayed as "Recently inspected". This reflects the fact that CQC's comprehensive inspections provide the definitive judgements for each organisation.

What guidance is available?

The Indicator and Methodology Guidance document describes more about Intelligent Monitoring and provides definitions and the full methodology for each indicator. It also provides details of time periods covered and the analysis applied.

The Statistical Methodology document provides a more detailed description of the statistical methods of data analysis used.

Both documents are available on Intelligent Monitoring section of the CQC website- <http://www.cqc.org.uk/public/hospital-intelligent-monitoring>
