

Care Quality Commission

Inspection Evidence Table

Albion Medical Practice (1-558308813)

Inspection date: 16/10/2018

Date of data download: 09 October 2018

Safe

Safety systems and processes

Safeguarding	Y/N
There was a lead member of staff for safeguarding processes and procedures.	Yes
Safety and safeguarding systems, processes and practices were developed, implemented and communicated to staff.	Yes
Policies were in place covering adult and child safeguarding.	Yes
Information about patients at risk was shared with other agencies in a timely way.	Yes
Systems were in place to highlight vulnerable patients on record. There was a risk register of specific patients	Yes

Track record on safety and lessons learned and improvements made

Significant events	Y/N
There was a system for recording and acting on significant events	Yes
Staff understood how to report incidents both internally and externally	Yes
There was evidence of learning and dissemination of information	Yes
A clear system was in place to share learning and review actions taken in light of significant events.	

Example(s) of significant events recorded and actions by the practice;

Event	Specific action taken
Two week wait delayed referral	Clear audit carried out to identify error, support and training provided to staff involved to prevent repeat incidents.
Fridge failure	Cold chain procedure followed, vaccination manufacturers contacted and appropriate action taken.

Safety Alerts	Y/N
There was a system for recording and acting on safety alerts	Yes

Staff understand how to deal with alerts	Yes
A new system had been implemented with actions and outcomes clearly documented and alerts were now a standard agenda item for clinical meetings. We saw examples of the actions taken by the practice for two recent alerts including Sodium Valproate.	

Notes: CQC GP Insight

GP Insight assesses a practice's data against all the other practices in England. We assess relative performance for the majority of indicators using a "z-score" (this tells us the number of standard deviations from the mean the data point is), giving us a statistical measurement of a practice's performance in relation to the England average. We highlight practices which significantly vary from the England average (in either a positive or negative direction). We consider that z-scores which are higher than +2 or lower than -2 are at significant levels, warranting further enquiry. Using this technique we can be 95% confident that the practice's performance is genuinely different from the average. It is important to note that a number of factors can affect the Z score for a practice, for example a small denominator or the distribution of the data. This means that there will be cases where a practice's data looks quite different to the average, but still shows as comparable, as we do not have enough confidence that the difference is genuine. There may also be cases where a practice's data looks similar across two indicators, but they are in different variation bands.

The percentage of practices which show variation depends on the distribution of the data for each indicator, but is typically around 10-15% of practices. The practices which are not showing significant statistical variation are labelled as comparable to other practices.

N.B. Not all indicators in the evidence table are part of the GP insight set and those that aren't will not have a variation band.

The following language is used for showing variation:

	Variation Band	Z-score threshold
1	Significant variation (positive)	$Z \leq -3$
2	Variation (positive)	$-3 < Z \leq -2$
3	Comparable to other practices	$-2 < Z < 2$
4	Variation (negative)	$2 \leq Z < 3$
5	Significant variation (negative)	$Z \geq 3$
6	No data	Null

Note: for the following indicators the variation bands are different:

- Child Immunisation indicators. These are scored against the World Health Organisation target of 95% rather than the England average.

It is important to note that z-scores are not a judgement in themselves, but will prompt further enquiry, as part of our ongoing monitoring of GP practices.

Guidance and Frequently Asked Questions on GP Insight can be found on the following link:

Glossary of terms used in the data.

- **COPD:** Chronic Obstructive Pulmonary Disease
- **PHE:** Public Health England
- **QOF:** Quality and Outcomes Framework (see <https://qof.digital.nhs.uk/>).
- **RCP:** Royal College of Physicians.
- **STAR-PU:** Specific Therapeutic Group Age-sex weightings Related Prescribing Units. These weighting allow more accurate and meaningful comparisons within a specific therapeutic group by taking into account the types of people who will be receiving that treatment. ([See NHS Choices for more details](#)).
