

Care Quality Commission

Inspection Evidence Table

Dr S J Morris & Partners (1-560169838)

Inspection date: 7 November 2018

Date of data download: 24 October 2018

Please note: Any Quality Outcomes Framework (QOF) data relates to 2016/17.

Caring

National GP Survey results

Note: The questions in the 2018 GP Survey indicators have changed. Ipsos MORI have advised that the new survey data must not be directly compared to the past survey data, because the survey methodology has changed in 2018. This means that we cannot be sure whether the change in scores was due to the change in methodology, or was due to a genuine change in patient experience.

Practice population size	Surveys sent out	Surveys returned	Survey Response rate%	% of practice population
15180	234	114	48.6%	0.75%

Indicator	Practice	CCG average	England average	England comparison
The percentage of respondents to the GP patient survey who stated that the last time they had a general practice appointment, the healthcare professional was good or very good at listening to them (01/01/2018 to 31/03/2018)	87.2%	88.7%	89.0%	Comparable with other practices
The percentage of respondents to the GP patient survey who stated that the last time they had a general practice appointment, the healthcare professional was good or very good at treating them with care and concern (01/01/2018 to 31/03/2018)	80.1%	85.7%	87.4%	Comparable with other practices
The percentage of respondents to the GP patient survey who stated that during their last GP appointment they had confidence and trust in the healthcare professional they saw or	93.4%	95.7%	95.6%	Comparable with other practices

Indicator	Practice	CCG average	England average	England comparison
spoke to (01/01/2018 to 31/03/2018)				
The percentage of respondents to the GP patient survey who responded positively to the overall experience of their GP practice (01/01/2018 to 31/03/2018)	69.2%	82.0%	83.8%	Comparable with other practices

Involvement in decisions about care and treatment

National GP Survey results

Indicator	Practice	CCG average	England average	England comparison
The percentage of respondents to the GP patient survey who stated that during their last GP appointment they were involved as much as they wanted to be in decisions about their care and treatment (01/01/2018 to 31/03/2018)	91.2%	92.7%	93.5%	Comparable with other practices

Carers	Narrative
Percentage and number of carers identified	The practice had identified 1% (166 patients) of the practice population as carers.
How the practice supports carers	There were leaflets in reception directing carers to respite services, home help services and external support organisations. Carers were offered urgent appointments where possible and appropriate vaccinations, such as for Influenza.

Notes: CQC GP Insight

GP Insight assesses a practice's data against all the other practices in England. We assess relative performance for the majority of indicators using a "z-score" (this tells us the number of standard deviations from the mean the data point is), giving us a statistical measurement of a practice's performance in relation to the England average. We highlight practices which significantly vary from the England average (in either a positive or negative direction). We consider that z-scores which are higher than +2 or lower than -2 are at significant levels, warranting further enquiry. Using this technique we can be 95% confident that the practice's performance is genuinely different from the average. It is important to note that a number of factors can affect the Z score for a practice, for example a small denominator or the distribution of the data. This means that there will be cases where a practice's data looks quite different to the average, but still shows as comparable, as we do not have enough confidence that the difference is genuine. There may also be cases where a practice's data looks similar across two indicators, but they are in different variation bands.

The percentage of practices which show variation depends on the distribution of the data for each indicator, but is typically around 10-15% of practices. The practices which are not showing significant statistical variation are labelled as comparable to other practices.

N.B. Not all indicators in the evidence table are part of the GP insight set and those that aren't will not have a variation band.

The following language is used for showing variation:

	Variation Band	Z-score threshold
1	Significant variation (positive)	$Z \leq -3$
2	Variation (positive)	$-3 < Z \leq -2$
3	Comparable to other practices	$-2 < Z < 2$
4	Variation (negative)	$2 \leq Z < 3$
5	Significant variation (negative)	$Z \geq 3$
6	No data	Null

Note: for the following indicators the variation bands are different:

- Child Immunisation indicators. These are scored against the World Health Organisation target of 95% rather than the England average.

It is important to note that z-scores are not a judgement in themselves, but will prompt further enquiry, as part of our ongoing monitoring of GP practices.

Glossary of terms used in the data.

- **COPD:** Chronic Obstructive Pulmonary Disease
- **PHE:** Public Health England
- **QOF:** Quality and Outcomes Framework (see <https://qof.digital.nhs.uk/>).
- **RCP:** Royal College of Physicians.
- **STAR-PU:** Specific Therapeutic Group Age-sex weightings Related Prescribing Units. These weighting allow more accurate and meaningful comparisons within a specific therapeutic group by taking into account the types of people who will be receiving that treatment. ([See NHS Choices for more details](#)).
