

Care Quality Commission

Inspection Evidence Table

Dr Muhammad Shahzad (1-6692416132)

Inspection date: 15/04/2021

Date of data download: 07 April 2021

Safe

Rating: Good

At the last inspection the practice was rated as requires improvement for providing safe services because safeguarding policies did not take into account patients accessing online services, staff were not up to date with their routine immunisations, action was always taken to address health and safety risk assessment recommendations, premises and security risk assessments had not been undertaken and up to date fire safety training had not been undertaken by all staff.

At this inspection we found the practice had rectified all the shortfalls identified in providing safe services.

Safety systems and processes

The practice had clear systems, practices and processes to keep people safe and safeguarded from abuse.

Safeguarding	Y/N/Partial
Safeguarding policies to account of patients accessing any online services.	Y

Recruitment systems	Y/N/Partial
Staff vaccination was maintained in line with current Public Health England (PHE) guidance if relevant to role.	Y

Safety systems and records	Y/N/Partial
There was a record of fire safety training for staff.	Y

Health and safety	Y/N/Partial
Premises/security risk assessment had been carried out.	Y
Health and safety risk assessments had been carried out and appropriate action taken.	Y

Additional evidence;

	Practice	CCG Average	England Average	England Comparison
Latest published PHE data;				
The percentage of women eligible for cervical cancer screening at a given point in time who were screened adequately within a specified period (within 3.5 years for women aged 25 to 49, and within 5.5 years for women aged 50 to 64). (Snapshot date: 30/09/2020) (Public Health England)	52.3%	N/A	80% Target	Below 70% uptake
Published data from the previous inspection;				
The percentage of women eligible for cervical cancer screening at a given point in time who were screened adequately within a specified period (within 3.5 years for women aged 25 to 49, and within 5.5 years for women aged 50 to 64). (01/04/2017 to 31/03/2018) (Public Health England)	57.6%	N/A	80% Target	Below 70% uptake

Latest published data from the National GP Patient Survey;

The percentage of respondents to the GP patient survey who stated that the last time they had a general practice appointment, the healthcare professional was good or very good at treating them with care and concern (01/01/2020 to 31/03/2020)	87.0%	84.1%	87.0%	No statistical variation
---	-------	-------	-------	--------------------------

Notes: CQC GP Insight

GP Insight assesses a practice's data against all the other practices in England. We assess relative performance for the majority of indicators using a "z-score" (this tells us the number of standard deviations from the mean the data point is), giving us a statistical measurement of a practice's performance in relation to the England average. We highlight practices which significantly vary from the England average (in either a positive or negative direction). We consider that z-scores which are higher than +2 or lower than -2 are at significant levels, warranting further enquiry. Using this technique we can be 95% confident that the practice's performance is genuinely different from the average. It is important to note that a number of factors can affect the Z score for a practice, for example a small denominator or the distribution of the data. This means that there will be cases where a practice's data looks quite different to the average, but still shows as no statistical variation, as we do not have enough confidence that the difference is genuine. There may also be cases where a practice's data looks similar across two indicators, but they are in different variation bands.

The percentage of practices which show variation depends on the distribution of the data for each indicator, but is typically around 10-15% of practices. The practices which are not showing significant statistical variation are labelled as no statistical variation to other practices.

N.B. Not all indicators in the evidence table are part of the GP insight set and those that aren't will not have a variation band.

The following language is used for showing variation:

Variation Bands	Z-score threshold
Significant variation (positive)	≤ -3
Variation (positive)	> -3 and ≤ -2
Tending towards variation (positive)	> -2 and ≤ -1.5
No statistical variation	< 1.5 and > -1.5
Tending towards variation (negative)	≥ 1.5 and < 2
Variation (negative)	≥ 2 and < 3
Significant variation (negative)	≥ 3

Note: for the following indicators the variation bands are different:

- Child Immunisation indicators. These are scored against the World Health Organisation target of 95% rather than the England average. Note that practices that have "Met 90% minimum" have not met the WHO target of 95%.
- The percentage of respondents to the GP patient survey who responded positively to how easy it was to get through to someone at their GP practice on the phone uses a rules based approach for scoring, due to the distribution of the data. This indicator does not have a CCG average.
- The percentage of women eligible for cervical cancer screening at a given point in time who were screened adequately within a specified period (within 3.5 years for women aged 25 to 49, and within 5.5 years for women aged 50 to 64). This indicator does not have a CCG average and is scored against the national target of 80%.

It is important to note that z-scores are not a judgement in themselves, but will prompt further enquiry, as part of our ongoing monitoring of GP practices.

Guidance and Frequently Asked Questions on GP Insight can be found on the following link: <https://www.cqc.org.uk/guidance-providers/gps/how-we-monitor-gp-practices>

Note: The CQC GP Evidence Table uses the most recent validated and publicly available data. In some cases at the time of inspection this data may be relatively old. If during the inspection the practice has provided any more recent data, this can be considered by the inspector. However, it should be noted that any data provided by the practice will be unvalidated and is not directly comparable to the published data. This has been taken into account during the inspection process.

Glossary of terms used in the data.

- **COPD:** Chronic Obstructive Pulmonary Disease.
- **PHE:** Public Health England.
- **QOF:** Quality and Outcomes Framework.
- **STAR-PU:** Specific Therapeutic Group Age-sex weightings Related Prescribing Units. These weighting allow more accurate and meaningful comparisons within a specific therapeutic group by taking into account the types of people who will be receiving that treatment.
- ***PCA:** Personalised Care Adjustment. This replaces the QOF Exceptions previously used in the Evidence Table (see [GMS QOF Framework](#)).
- $\%$ = per thousand.
