## Overall summary

### Letter from the Chief Inspector of General Practice

We carried out an announced comprehensive inspection at Chrisp Street Health Centre on 1 June 2016. Overall the practice is rated as good.

Our key findings across all the areas we inspected were as follows:

- There was an open and transparent approach to safety and an effective system in place for reporting and recording significant events.
- Risks to patients were assessed and well managed.
- Staff assessed patients' needs and delivered care in line with current evidence based guidance. Staff had been trained to provide them with the skills, knowledge and experience to deliver effective care and treatment.
- The practice carried out an anticoagulation service for a network of five practices.
- Patients said they were treated with compassion, dignity and respect and they were involved in their care and decisions about their treatment.

- Information about services and how to complain was available and easy to understand. Improvements were made to the quality of care as a result of complaints and concerns.
- The practice carried out an annual patient survey to improve patient satisfaction with practice services.
- Patients said they found it easy to make an appointment with a named GP and there was continuity of care, with urgent appointments available the same day.
- The practice had good facilities and was well equipped to treat patients and meet their needs.
- There was a clear leadership structure and staff felt supported by management. The practice proactively sought feedback from staff and patients, which it acted on.
- The provider was aware of and complied with the requirements of the duty of candour.

### Professor Steve Field (CBE FRCP FFPH FRCGP)

Chief Inspector of General Practice

# Summary of findings

## The five questions we ask and what we found

We always ask the following five questions of services.

### Are services safe?

The practice is rated as good for providing safe services.

- There was an effective system in place for reporting and recording significant events
- Lessons were shared to make sure action was taken to improve safety in the practice.
- When things went wrong patients received reasonable support, truthful information, and a written apology. They were told about any actions to improve processes to prevent the same thing happening again.
- The practice had clearly defined and embedded systems, processes and practices in place to keep patients safe and safeguarded from abuse.
- Risks to patients were assessed and well managed.

Good

### Are services effective?

The practice is rated as good for providing effective services.

- Data from the Quality and Outcomes Framework (QOF) showed patient outcomes were at or above average compared to the national average.
- Staff assessed needs and delivered care in line with current evidence based guidance.
- Clinical audits demonstrated quality improvement.
- Staff had the skills, knowledge and experience to deliver effective care and treatment.
- There was evidence of appraisals and personal development plans for all staff.
- Staff worked with other health care professionals to understand and meet the range and complexity of patients' needs.

Good

### Are services caring?

The practice is rated as good for providing caring services.

- Data from the national GP patient survey showed patients rated the practice higher than others for several aspects of care.
- Patients said they were treated with compassion, dignity and respect and they were involved in decisions about their care and treatment.
- Information for patients about the services available was easy to understand and accessible.
- We saw staff treated patients with kindness and respect, and maintained patient and information confidentiality.

Good

# Summary of findings

## Are services responsive to people's needs?

The practice is rated as good for providing responsive services.

- Practice staff reviewed the needs of its local population and engaged with the NHS England Area Team and Clinical Commissioning Group to secure improvements to services where these were identified, which included hosting an alcohol and drugs misuse service.
- Patients said they found it easy to make an appointment with a named GP and there was continuity of care, with urgent appointments available the same day.
- The practice had good facilities and was well equipped to treat patients and meet their needs.
- Information about how to complain was available and easy to understand and evidence showed the practice responded quickly to issues raised. Learning from complaints was shared with staff and other stakeholders.

Good

## Are services well-led?

The practice is rated as good for being well-led.

- The practice had a clear vision and strategy to deliver high quality care and promote good outcomes for patients. Staff were clear about the vision and their responsibilities in relation to it.
- There was a clear leadership structure and staff felt supported by management. The practice had a number of policies and procedures to govern activity and held regular governance meetings.
- There was an overarching governance framework which supported the delivery of the strategy and good quality care. This included arrangements to monitor and improve quality and identify risk.
- The provider was aware of and complied with the requirements of the duty of candour. The partners encouraged a culture of openness and honesty. The practice had systems in place for notifiable safety incidents and ensured this information was shared with staff to ensure appropriate action was taken.
- The practice proactively sought feedback from staff and patients, which it acted on. The patient participation group was active.
- The practice carried out an annual patient survey to help to improve practice services.
- There was a strong focus on continuous learning and improvement at all levels.

Good

# Summary of findings

## The six population groups and what we found

We always inspect the quality of care for these six population groups.

### Older people

The practice is rated as good for the care of older people.

- The practice offered proactive, personalised care to meet the needs of the older people in its population.
- The practice was responsive to the needs of older people, and offered home visits and urgent appointments for those with enhanced needs.
- The practice was a part of a scheme, which focuses on older patients, housebound patients and the vulnerable.

Good

### People with long term conditions

The practice is rated as good for the care of people with long-term conditions.

- Nursing staff had lead roles in chronic disease management and patients at risk of hospital admission were identified as a priority.
- The percentage of patients on the diabetes register with a record of a foot examination and risk classification in the preceding 12 months was 92% compared with a national average of 88%.
- Longer appointments and home visits were available when needed.
- All these patients had a named GP and a structured annual review to check their health and medicines needs were being met. For those patients with the most complex needs, the named GP worked with relevant health and care professionals to deliver a multidisciplinary package of care.
- The practice produced a self-help leaflet which advised patients how to self-manage certain illnesses.

Good

### Families, children and young people

The practice is rated as good for the care of families, children and young people.

- There were systems in place to identify and follow up children living in disadvantaged circumstances and who were at risk, for example, children and young people who had a high number of A&E attendances. Immunisation rates were relatively high for all standard childhood immunisations.

Good

# Summary of findings

- Patients told us that children and young people were treated in an age-appropriate way and were recognised as individuals, and we saw evidence to confirm this.
- 88% of women aged 25 to 64 had a record of a cervical screening test documented in their record in the preceding five years compared to 82% nationally.
- Appointments were available outside of school hours and the premises were suitable for children and babies.
- We saw positive examples of joint working with midwives, health visitors and school nurses.

## **Working age people (including those recently retired and students)**

The practice is rated as good for the care of working-age people (including those recently retired and students).

- The needs of the working age population, those recently retired and students had been identified and the practice had adjusted the services it offered to ensure these were accessible, flexible and offered continuity of care.
- The practice was proactive in offering online services including telephone consultations and phlebotomy as well as a full range of health promotion and screening that reflects the needs for this age group.
- The practice offered extended hours two days a week and was open one Saturday a month for patients who were unable to attend the practice during normal working hours.

Good

## **People whose circumstances may make them vulnerable**

The practice is rated as good for the care of people whose circumstances may make them vulnerable.

- The practice held a register of patients living in vulnerable circumstances including homeless people and those with a learning disability.
- The practice offered longer appointments for patients with a learning disability.
- The practice regularly worked with other health care professionals in the case management of vulnerable patients.
- The practice informed vulnerable patients about how to access various support groups and voluntary organisations.
- Staff knew how to recognise signs of abuse in vulnerable adults and children. Staff were aware of their responsibilities regarding information sharing, documentation of safeguarding concerns and how to contact relevant agencies in normal working hours and out of hours.

Good

# Summary of findings

## People experiencing poor mental health (including people with dementia)

The practice is rated as good for the care of people experiencing poor mental health (including people with dementia).

- 84% of patients diagnosed with dementia had their care reviewed in a face to face meeting in the last 12 months, which is the same as the national average.
- The percentage of patients with schizophrenia, bipolar affective disorder and other psychosis who had a comprehensive agreed care plan documented in the record was 88% which was equal to the national average of 88%.
- The practice regularly worked with multi-disciplinary teams in the case management of patients experiencing poor mental health, including those with dementia.
- The practice carried out advance care planning for patients with dementia.
- The practice had told patients experiencing poor mental health about how to access various support groups and voluntary organisations.
- The practice had a system in place to follow up patients who had attended accident and emergency where they may have been experiencing poor mental health.
- Staff had a good understanding of how to support patients with mental health needs and dementia.
- A GP with other clinicians visited local mosques and spoke to hard to reach population about mental health giving information and advice.

Good

# Summary of findings

## What people who use the service say

The national GP patient survey results were published in January 2016. The results showed the practice was performing in line with local and national averages. Four hundred and twelve survey forms were distributed and 113 were returned. This represented 0.8% of the practice's patient list.

- 84% of patients found it easy to get through to this practice by phone compared to the national average of 73%.
- 80% of patients were able to get an appointment to see or speak to someone the last time they tried compared to the national average of 76%.
- 79% of patients described the overall experience of this GP practice as good compared to the national average of 85%.

- 75% of patients said they would recommend this GP practice to someone who has just moved to the local area compared to the national average of 79%.

As part of our inspection we also asked for CQC comment cards to be completed by patients prior to our inspection. We received 29 comment cards which were all positive about the standard of care received. There was a recurring theme of caring staff who go above and beyond.

We spoke with four patients during the inspection. All four patients said they were satisfied with the care they received and thought staff were approachable, committed and caring. The practice participated in the Friends and Family Test; results showed that 88% of patients would recommend the practice to friends and family members.

# Chrisp Street Practice

## Detailed findings

### Our inspection team

#### Our inspection team was led by:

Our inspection team was led by a CQC Lead Inspector. The team included a GP specialist and a practice nurse specialist adviser.

## Background to Chrisp Street Practice

Chrisp Street Health Centre is located in a purpose built building within a residential area in East London. The practice is a part of Tower Hamlets Clinical Commissioning Group.

There are 14000 patients registered at the practice, 35% of which are of South Asian origin and 35% are white British.

The practice has five male and three female GP partners and two male salaried GP's carrying out 56 sessions per week. There are four female practice nurses and one female partner nurse carrying out 35 sessions per week and two assistant practitioners. The practice has one practice manager and 16 reception/administration staff members.

The practice is a training practice for first, second and fifth year medical students and provides placements to nursing students.

The practice operates under a General Medical Services Contract (GMS); a contract between NHS England and general practices for delivering general medical services. This is the commonest form of GP contract.

The practice is open Monday to Friday between 8:30am and 6:30pm and one Saturday a month from 9:00am to 12:00pm. Phone lines are open from 8:30am and appointment times are as follows:

- Monday 8:30am to 12:00pm and 2:00pm to 6:30pm
- Tuesday 8:30am to 12:30pm and 2:00pm to 7:30pm
- Wednesday 8:30am to 12:30pm and 2:00pm to 6:00pm
- Thursday 8:30am to 12:00pm and 2:00pm to 7:30pm
- Friday 8:45am to 12:45pm and 2:00pm to 6:00pm
- Saturday 9:00am to 12:00pm (once a month)

The out of hours provider covers calls made to the practice whilst it is closed.

Chrisp Street Health Centre operates regulated activities from one location and is registered with the Care Quality Commission to provide treatment of disease, disorder or injury, family planning, maternity and midwifery, diagnostic and screening procedures and surgical procedures.

## Why we carried out this inspection

We inspected this service as part of our new comprehensive programme. This location had not previously been inspected.

We carried out a comprehensive inspection of this service under Section 60 of the Health and Social Care Act 2008 as part of our regulatory functions. The inspection was planned to check whether the provider is meeting the legal requirements and regulations associated with the Health and Social Care Act 2008, to look at the overall quality of the service, and to provide a rating for the service under the Care Act 2014.

# Detailed findings

## How we carried out this inspection

Before visiting, we reviewed a range of information we hold about the practice and asked other organisations to share what they knew. We carried out an announced visit on 1 June 2016. During our visit we:

- Spoke with a range of staff including GP's, nurses, managers and administration/reception staff members and spoke with patients who used the service.
- Observed how patients were being cared for and talked with carers and/or family members
- Reviewed an anonymised sample of the personal care or treatment records of patients.
- Reviewed comment cards where patients and members of the public shared their views and experiences of the service.

To get to the heart of patients' experiences of care and treatment, we always ask the following five questions:

- Is it safe?
- Is it effective?

- Is it caring?
- Is it responsive to people's needs?
- Is it well-led?

We also looked at how well services were provided for specific groups of people and what good care looked like for them. The population groups are:

- Older people
- People with long-term conditions
- Families, children and young people
- Working age people (including those recently retired and students)
- People whose circumstances may make them vulnerable
- People experiencing poor mental health (including people with dementia)

Please note that when referring to information throughout this report, for example any reference to the Quality and Outcomes Framework data, this relates to the most recent information available to the CQC at that time.

# Are services safe?

## Our findings

### Safe track record and learning

There was an effective system in place for reporting and recording significant events.

- Staff told us they would inform the practice manager of any incidents and there was a recording form available on the practice's intranet system. The incident recording form supported the recording of notifiable incidents under the duty of candour. (The duty of candour is a set of specific legal requirements that providers of services must follow when things go wrong with care and treatment).
- We saw evidence that when things went wrong with care and treatment, patients were informed of the incident, received reasonable support, truthful information, a written apology and were told about any actions to improve processes to prevent the same thing happening again.
- The practice carried out a thorough analysis of the significant events.

We reviewed safety records, incident reports, patient safety alerts and minutes of meetings where these were discussed. We saw evidence that lessons were shared and action was taken to improve safety in the practice. For example, we viewed a completed significant event form about the theft of a courier's motorbike whilst they were transporting patient samples. We saw that potentially affected patients were contacted with an apology and explanation, the police were informed of the incident, there was a practice meeting where the incident was discussed and a barcoding system was put in place to ensure that samples could be traced. The practice discussed the incident at their locality meeting with the other Tower Hamlets GP practices.

### Overview of safety systems and processes

The practice had clearly defined and embedded systems, processes and practices in place to keep patients safe and safeguarded from abuse, which included:

- Arrangements were in place to safeguard children and vulnerable adults from abuse. These arrangements reflected relevant legislation and local requirements. Policies were accessible to all staff. The policies clearly

outlined who to contact for further guidance if staff had concerns about a patient's welfare. There was a lead GP partner for safeguarding. The GPs attended safeguarding meetings when possible and always provided reports where necessary for other agencies. Staff demonstrated they understood their responsibilities and all had received training on safeguarding children and vulnerable adults relevant to their role. GPs were trained to child safeguarding level 3, nurses were trained to level 2 and non-clinical staff were trained to level 1.

- A notice in the waiting room and all consulting rooms advised patients that chaperones were available if required; these notices were displayed in different languages. All staff who acted as chaperones were trained for the role and had received a Disclosure and Barring Service (DBS) check. (DBS checks identify whether a person has a criminal record or is on an official list of people barred from working in roles where they may have contact with children or adults who may be vulnerable).
- The practice maintained appropriate standards of cleanliness and hygiene. We observed the premises to be clean and tidy. The practice nurse was the infection control clinical lead who liaised with the local infection prevention teams to keep up to date with best practice. There was an infection control protocol in place and staff had received up to date training. Annual infection control audits were undertaken and we saw evidence that action was taken to address any improvements identified as a result.
- The arrangements for managing medicines, including emergency medicines and vaccines, in the practice kept patients safe (including obtaining, prescribing, recording, handling, storing, security and disposal). Processes were in place for handling repeat prescriptions which included the review of high risk medicines. The practice carried out regular medicines audits, with the support of the local CCG pharmacy teams, to ensure prescribing was in line with best practice guidelines for safe prescribing. Blank prescription forms and pads were securely stored and there were systems in place to monitor their use. One of the nurses had qualified as an Independent Prescriber and could therefore prescribe medicines for specific clinical conditions. She received mentorship and

## Are services safe?

support from the medical staff for this extended role. Patient Group Directions had been adopted by the practice to allow nurses to administer medicines in line with legislation.

- We reviewed three personnel files and found appropriate recruitment checks had been undertaken prior to employment. For example, proof of identification, references, qualifications, registration with the appropriate professional body and the appropriate checks through the Disclosure and Barring Service.

### Monitoring risks to patients

Risks to patients were assessed and well managed.

- There were procedures in place for monitoring and managing risks to patient and staff safety. There was a health and safety policy available. The practice had up to date fire risk assessments and carried out regular fire drills. All electrical equipment was checked to ensure the equipment was safe to use and clinical equipment was checked to ensure it was working properly. The practice had a variety of other risk assessments in place to monitor safety of the premises such as control of substances hazardous to health and infection control and legionella (Legionella is a term for a particular bacterium which can contaminate water systems in buildings).

- Arrangements were in place for planning and monitoring the number of staff and mix of staff needed to meet patients' needs. There was a rota system in place for all the different staffing groups to ensure enough staff were on duty.

### Arrangements to deal with emergencies and major incidents

The practice had adequate arrangements in place to respond to emergencies and major incidents.

- There was an instant messaging system on all of the practice computers which alerted staff to any emergency.
- All staff received annual basic life support training and there were emergency medicines available in the treatment room.
- The practice had a defibrillator available on the premises and oxygen with adult and children's masks. A first aid kit and accident book were available.
- Emergency medicines were easily accessible to staff in a secure area of the practice and all staff knew of their location. All the medicines we checked were in date and stored securely.

The practice had a comprehensive business continuity plan in place for major incidents such as power failure or building damage. The plan included emergency contact numbers for staff.

# Are services effective?

(for example, treatment is effective)

## Our findings

### Effective needs assessment

The practice assessed needs and delivered care in line with relevant and current evidence based guidance and standards, including National Institute for Health and Care Excellence (NICE) best practice guidelines.

- The practice had systems in place to keep all clinical staff up to date. Staff had access to guidelines from NICE and used this information to deliver care and treatment that met patients' needs.
- The practice monitored that these guidelines were followed through risk assessments, audits and updates to protocols within the clinical system.

### Management, monitoring and improving outcomes for people

The practice used the information collected for the Quality and Outcomes Framework (QOF) and performance against national screening programmes to monitor outcomes for patients. (QOF is a system intended to improve the quality of general practice and reward good practice). The most recent published results were 99% of the total number of points available, with an exception reporting rate of 9% (Exception reporting is the removal of patients from QOF calculations where, for example, the patients are unable to attend a review meeting or certain medicines cannot be prescribed because of side effects).

This practice was not an outlier for any QOF (or other national) clinical targets. Data from QOF showed:

- Performance for diabetes related indicators was similar to the national average. For example, the percentage of patients on the diabetes register with a record of a foot examination and risk classification within the preceding 12 months was 92% compared with a national average of 88%.
- Performance for mental health related indicators was similar to the national average. For example, the percentage of patients diagnosed with dementia whose care had been reviewed in a face to face review in the preceding 12 months was 84% which was equal to the national average.

There was evidence of quality improvement including clinical audit.

- There had been 18 clinical audits carried out in the last 12 months, four of these were completed audits where the improvements made were implemented and monitored.
- The practice participated in local audits, national benchmarking, accreditation, peer review and research.
- Findings were used by the practice to improve services. For example, recent action taken as a result of an audit looking into the appropriateness of antibiotic prescribing led to an increase in the appropriate prescribing of quinolones from 20% at first audit to 55% at second by regularly reviewing prescribing data, by discussing first line antibiotics and putting prescribing alert reminders that are activated at the point of prescribing particular antibiotics. We saw minutes of meetings where guidelines were discussed to remind GP's about appropriate prescribing.

Information about patients' outcomes was used to make improvements such as: the practice hosting a drugs and alcohol misuse service in the practice, which we were told was always fully booked.

### Effective staffing

Staff had the skills, knowledge and experience to deliver effective care and treatment.

- The practice had an induction programme for all newly appointed staff. This covered such topics as safeguarding, infection prevention and control, fire safety, health and safety and confidentiality.
- The practice could demonstrate how they ensured role-specific training and updating for relevant staff. For example, for those reviewing patients with long-term conditions.
- Staff administering vaccines and taking samples for the cervical screening programme had received specific training which had included an assessment of competence. Staff who administered vaccines could demonstrate how they stayed up to date with changes to the immunisation programmes, for example by access to on line resources, updates and discussion at practice meetings.
- The learning needs of staff were identified through a system of appraisals, meetings and reviews of practice development needs. Staff had access to appropriate training to meet their learning needs and to cover the scope of their work. This included ongoing support,

# Are services effective?

## (for example, treatment is effective)

one-to-one meetings, coaching and mentoring, clinical supervision and facilitation and support for revalidating GPs. All staff had received an appraisal within the last 12 months.

- Staff received training that included: safeguarding, fire safety awareness, basic life support and information governance. Staff had access to and made use of e-learning training modules and in-house training.

### Coordinating patient care and information sharing

The information needed to plan and deliver care and treatment was available to relevant staff in a timely and accessible way through the practice's patient record system and their intranet system.

- This included care and risk assessments, care plans, medical records and investigation and test results.
- The practice shared relevant information with other services in a timely way, for example when referring patients to other services.

Staff worked together and with other health and social care professionals to understand and meet the range and complexity of patients' needs and to assess and plan ongoing care and treatment. This included when patients moved between services, including when they were referred, or after they were discharged from hospital. Meetings took place with other health care professionals on a monthly basis when care plans were routinely reviewed and updated for patients with complex needs.

### Consent to care and treatment

Staff sought patients' consent to care and treatment in line with legislation and guidance.

- Staff understood the relevant consent and decision-making requirements of legislation and guidance, including the Mental Capacity Act 2005. When providing care and treatment for children and young people, staff carried out assessments of capacity to consent in line with relevant guidance.
- Where a patient's mental capacity to consent to care or treatment was unclear the GP or practice nurse assessed the patient's capacity and, recorded the outcome of the assessment.
- The process for seeking consent was monitored through patient records audits.

### Supporting patients to live healthier lives

The practice identified patients who may be in need of extra support. For example:

- Patients receiving end of life care, patients living with cancer, carers, those at risk of developing a long-term condition and those requiring advice on their diet, smoking and alcohol cessation and. Patients were signposted to the relevant service.
- A dietician was available on the premises as was smoking cessation advice.
- The practice produced a health promotion leaflet, which gave advice on how to self-manage illnesses including coughs and cold, it also promoted interventions such as flu vaccinations.
- The practice composed health promotion videos that it played in the patient area promoting interventions such as cervical screening tests.
- A GP and practice nurse was involved in community health promotion video and regularly visited local mosques to talk to hard to reach men about mental health and fasting during Ramadan.

The practice's uptake for the cervical screening programme was 88%, which was comparable to the CCG average of 79% and the national average of 82%. There was a policy to offer telephone reminders for patients who did not attend for their cervical screening test. The practice demonstrated how they encouraged uptake of the screening programme by using information in different languages and for those with a learning disability and they ensured a female sample taker was available. There were failsafe systems in place to ensure results were received for all samples sent for the cervical screening programme and the practice followed up women who were referred as a result of abnormal results. The practice also encouraged its patients to attend national screening programmes for bowel and breast cancer screening.

Childhood immunisation rates for the vaccinations given were comparable to CCG and national averages. For example, childhood immunisation rates for the vaccinations given to under two year olds ranged from 95% to 96% compared to a CCG average of 92% to 93% and a national average of 73% to 93%. Vaccinations for five year olds ranged from 54% to 93% compared to a CCG average of 21% to 94% and a national average of 81% to 95%.

## Are services effective? (for example, treatment is effective)

Patients had access to appropriate health assessments and checks. These included health checks for new patients and

NHS health checks for patients aged 40–74. Appropriate follow-ups for the outcomes of health assessments and checks were made, where abnormalities or risk factors were identified.

# Are services caring?

## Our findings

### Kindness, dignity, respect and compassion

We observed members of staff were courteous and very helpful to patients and treated them with dignity and respect.

- Curtains were provided in consulting rooms to maintain patients' privacy and dignity during examinations, investigations and treatments.
- We noted that consultation and treatment room doors were closed during consultations; conversations taking place in these rooms could not be overheard.
- Reception staff knew when patients wanted to discuss sensitive issues or appeared distressed they could offer them a private room to discuss their needs.

All of the 29 patient Care Quality Commission comment cards we received were positive about the service experienced. Patients said they felt the practice offered an excellent service and staff were helpful, caring and treated them with dignity and respect.

We spoke with one member of the patient participation group (PPG). They also told us they were satisfied with the care provided by the practice and said their dignity and privacy was respected. Comment cards highlighted that staff responded compassionately when they needed help and provided support when required.

Results from the national GP patient survey showed patients felt they were treated with compassion, dignity and respect. The practice was in line for its satisfaction scores on consultations with GPs and nurses when compared with the CCG and national averages. For example:

- 85% of patients said the GP was good at listening to them compared to the clinical commissioning group (CCG) average of 84% and the national average of 89%.
- 81% of patients said the GP gave them enough time compared to the CCG average of 80% and the national average of 87%.
- 91% of patients said they had confidence and trust in the last GP they saw compared to the CCG average of 92% and the national average of 95%.

- 77% of patients said the last GP they spoke to was good at treating them with care and concern compared to the national average of 85%.
- 83% of patients said the last nurse they spoke to was good at treating them with care and concern compared to the national average of 91%.
- 90% of patients said they found the receptionists at the practice helpful compared to the CCG average of 84% and the national average of 87%.

### Care planning and involvement in decisions about care and treatment

Patients told us they felt involved in decision making about the care and treatment they received. They also told us they felt listened to and supported by staff and had sufficient time during consultations to make an informed decision about the choice of treatment available to them. Patient feedback from the comment cards we received was also positive and aligned with these views. We also saw that care plans were personalised.

Results from the national GP patient survey showed patients responded positively to questions about their involvement in planning and making decisions about their care and treatment. Results were in line with local and national averages. For example:

- 82% of patients said the last GP they saw was good at explaining tests and treatments compared to the CCG average of 80% and the national average of 86%.
- 78% of patients said the last GP they saw was good at involving them in decisions about their care compared to the national average of 82%.
- 79% of patients said the last nurse they saw was good at involving them in decisions about their care compared to the national average of 85%.

The practice provided facilities to help patients be involved in decisions about their care:

- Staff told us that translation services were available for patients who did not have English as a first language. We saw notices in the reception areas informing patients this service was available.
- Information leaflets were available in easy read format and in different languages.

## Are services caring?

- Health promotion presentations and videos were played in the patient waiting area.

### **Patient and carer support to cope emotionally with care and treatment**

Patient information leaflets and notices were available in the patient waiting area which told patients how to access a number of support groups and organisations.

Information about support groups was also available on the practice website.

The practice's computer system alerted GPs if a patient was also a carer. The practice had identified 153 patients as carers (1% of the practice list). Carers were offered an annual review and written information was available to direct carers to the various avenues of support available to them.

Staff told us that if families had suffered bereavement, their usual GP contacted them or sent them a sympathy card. This call was either followed by a patient consultation at a flexible time and location to meet the family's needs or by giving them advice on how to find a support service.

# Are services responsive to people's needs?

(for example, to feedback?)

## Our findings

### Responding to and meeting people's needs

The practice reviewed the needs of its local population and engaged with the NHS England Area Team and Clinical Commissioning Group (CCG) to secure improvements to services where these were identified. This included the practice providing an anticoagulation service for a network of five local practices.

- The practice offered extended hours on a Tuesday and Thursday evening until 7.30pm and once a month on a Saturday morning for working patients who could not attend during normal opening hours.
- There were longer appointments available for patients with a learning disability.
- Home visits were available for older patients and patients who had clinical needs which resulted in difficulty attending the practice.
- Same day appointments were available for children and those patients with medical problems that required a same day consultation.
- Telephone consultations as well as face to face appointments were able to be booked online.
- Patients were able to receive travel vaccinations available on the NHS, those only available privately were referred to other clinics.
- There were disabled facilities, a hearing loop and translation services available.

### Access to the service

The practice was open Monday to Friday between 8:30am and 6:30pm and one Saturday a month from 9:00am to 12:00pm. Phone lines are open from 8:30am and appointment times were as follows:

- Monday 8:30am to 12:00pm and 2:00pm to 6:30pm
- Tuesday 8:30am to 12:30pm and 2:00pm to 7:30pm
- Wednesday 8:30am to 12:30pm and 2:00pm to 6:00pm
- Thursday 8:30am to 12:00pm and 2:00pm to 7:30pm
- Friday 8:45am to 12:45pm and 2:00pm to 6:00pm
- Saturday 9:00am to 12:00pm (once a month)

In addition to pre-bookable appointments that could be booked up to eight weeks in advance, urgent

appointments were also available for people that needed them. Same day access to a GP or nurse was available through a system of GP and nurse triage following decision making guideline drawn up by the GP.

Results from the national GP patient survey showed that patient's satisfaction with how they could access care and treatment was comparable to local and national averages.

- 81% of patients were satisfied with the practice's opening hours compared to the national average of 78%.
- 84% of patients said they could get through easily to the practice by phone compared to the national average of 73%.

People told us on the day of the inspection that they were able to get appointments when they needed them.

The practice had a system in place to assess:

- whether a home visit was clinically necessary; and
- the urgency of the need for medical attention.

In cases where the urgency of need was so great that it would be inappropriate for the patient to wait for a GP home visit, alternative emergency care arrangements were made. Clinical and non-clinical staff were aware of their responsibilities when managing requests for home visits.

### Listening and learning from concerns and complaints

The practice had an effective system in place for handling complaints and concerns.

- Its complaints policy and procedures were in line with recognised guidance and contractual obligations for GPs in England.
- The practice manager was responsible for handling all complaints in the practice.
- We saw that information was available to help patients understand the complaints system, there was a poster displayed in the waiting area and information was available on the practice website and in the practice leaflet. The practice also had a separate complaints leaflet that gave information about how to complain about the practice and other services.

We looked at five out of 41 complaints received in the last 12 months and found these were satisfactorily handled and dealt with in a timely way with openness and

## Are services responsive to people's needs? (for example, to feedback?)

transparency. Lessons were learnt from individual concerns and complaints and also from analysis of trends and action was taken to as a result to improve the quality of care. For example, we viewed a complaint from a patient who missed a telephone contact made to them by the practice, and on contacting the practice to enquire what the

telephone contact was about they were not given a clear answer by reception. We saw that the patient received an apology and viewed minutes of a meeting where this was discussed and processes put in place to prevent the incident from happening again, which included staff training.

# Are services well-led?

Good 

(for example, are they well-managed and do senior leaders listen, learn and take appropriate action)

## Our findings

### Vision and strategy

The practice had a clear vision to deliver high quality care and promote good outcomes for patients.

- The practice had a mission statement which was displayed in the reception areas and staff knew and understood the values.
- The practice had a robust strategy and supporting business plans which reflected the vision and values and were regularly monitored.

### Governance arrangements

The practice had an overarching governance framework which supported the delivery of the strategy and good quality care. This outlined the structures and procedures in place and ensured that:

- There was a clear staffing structure and that staff were aware of their own roles and responsibilities as well as the roles of their colleagues.
- Practice specific policies were implemented and were available to all staff.
- A comprehensive understanding of the performance of the practice was maintained.
- A programme of continuous clinical and internal audit was used to monitor quality and to make improvements.
- There were robust arrangements for identifying, recording and managing risks, issues and implementing mitigating actions.

### Leadership and culture

On the day of inspection the partners in the practice demonstrated they had the experience, capacity and capability to run the practice and ensure high quality care. They told us they prioritised safe, high quality and compassionate care. Staff told us the partners were approachable and always took the time to listen to all members of staff.

The provider was aware of and had systems in place to ensure compliance with the requirements of the duty of candour. (The duty of candour is a set of specific legal requirements that providers of services must follow when

things go wrong with care and treatment). This included support training for all staff on communicating with patients about notifiable safety incidents. The partners encouraged a culture of openness and honesty. The practice had systems in place to ensure that when things went wrong with care and treatment:

- The practice gave affected people reasonable support, truthful information and a verbal and written apology.
- The practice kept written records of verbal interactions as well as written correspondence and carried out an annual audit which also looked at trends.

There was a clear leadership structure in place and staff felt supported by management.

- Staff told us the practice held regular team meetings.
- Staff told us there was an open culture within the practice and they had the opportunity to raise any issues at team meetings and felt confident and supported in doing so. We noted partnership away days were held every 12 months.
- Staff said they felt respected, valued and supported, particularly by the partners in the practice. All staff were involved in discussions about how to run and develop the practice, and the partners encouraged all members of staff to identify opportunities to improve the service delivered by the practice.

### Seeking and acting on feedback from patients, the public and staff

The practice encouraged and valued feedback from patients, the public and staff. It proactively sought patients' feedback and engaged patients in the delivery of the service.

- The practice had gathered feedback from patients through the patient participation group (PPG) and through surveys and complaints received. The PPG met regularly, carried out patient surveys and submitted proposals for improvements to the practice management team. For example, as a result of requests from the PPG the practice changed its telephone system to make it easier to get through to the practice and a rota was put in place to check the cleanliness of the patient toilets. The PPG initiated a walking group to promote healthy lifestyles to patients in the practice.

# Are services well-led?

Good 

(for example, are they well-managed and do senior leaders listen, learn and take appropriate action)

- The practice carried out an annual patient survey to improve patient satisfaction with practice services, the practice scored over 80% satisfaction in all areas measured.
- The practice had gathered feedback from staff through staff away days and generally through staff meetings, appraisals and discussion. Staff told us they would not hesitate to give feedback and discuss any concerns or issues with colleagues and management. Staff told us they felt involved and engaged to improve how the practice was run.

## Continuous improvement

There was a focus on continuous learning and improvement at all levels within the practice. The practice team was forward thinking and part of local pilot schemes to improve outcomes for patients in the area. This included the practice nurse working with local mosques to provide information and advice on depression to hard to reach populations, carrying out an anticoagulation service for patients from local practices and designed patient self-help leaflets for illnesses like coughs and colds.
