Overall summary

Letter from the Chief Inspector of General Practice

We carried out an announced comprehensive inspection at Dr Jerome Kaine Ikwueke on 9 January 2017. Overall the practice is rated as good.

Our key findings across all the areas we inspected were as follows:

- There was an open and transparent approach to safety and an effective system in place for reporting and recording significant events.
- Risks to patients were assessed and well managed.
- Staff assessed patients' needs and delivered care in line with current evidence based guidance. Staff had been trained to provide them with the skills, knowledge and experience to deliver effective care and treatment.
- Patients said they were treated with compassion, dignity and respect and they were involved in their care and decisions about their treatment.
- Information about services and how to complain was available and easy to understand. Improvements were made to the quality of care as a result of complaints and concerns.

- Patients said they found it easy to make an appointment with a named GP and there was continuity of care, with urgent appointments available the same day.
- The practice had good facilities and was well equipped to treat patients and meet their needs.
- There was a clear leadership structure and staff felt supported by management. The practice proactively sought feedback from staff and patients, which it acted on.
- The provider was aware of and complied with the requirements of the duty of candour.

The areas where the provider should make improvement are:

- Improve the identification of carers to ensure their needs are known and can be met.

Professor Steve Field (CBE FRCP FFPH FRCGP)

Chief Inspector of General Practice

Summary of findings

The five questions we ask and what we found

We always ask the following five questions of services.

Are services safe?

The practice is rated as good for providing safe services.

- There was an effective system in place for reporting and recording significant events
- Lessons were shared to make sure action was taken to improve safety in the practice.
- When things went wrong patients received reasonable support, truthful information, and a written apology. They were told about any actions to improve processes to prevent the same thing happening again.
- The practice had clearly defined and embedded systems, processes and practices in place to keep patients safe and safeguarded from abuse.
- Risks to patients were assessed and well managed.

Good

Are services effective?

The practice is rated as good for providing effective services.

- Data from the Quality and Outcomes Framework (QOF) showed patient outcomes were comparable or the CCG and national average.
- Staff assessed needs and delivered care in line with current evidence based guidance.
- Clinical audits demonstrated quality improvement.
- Staff had the skills, knowledge and experience to deliver effective care and treatment.
- There was evidence of appraisals and personal development plans for all staff.
- Staff worked with other health care professionals to understand and meet the range and complexity of patients' needs.

Good

Are services caring?

The practice is rated as good for providing caring services.

- Data from the national GP patient survey showed patients rated the practice in line with others for several aspects of care.
- Patients said they were treated with compassion, dignity and respect and they were involved in decisions about their care and treatment.
- Information for patients about the services available was easy to understand and accessible.
- We saw staff treated patients with kindness and respect, and maintained patient and information confidentiality.

Good

Summary of findings

- The practice also provided a taxi service which they paid for to older patients vulnerable patients to ensure they arrived and departed the practice safely. They also provided food, such as tea and biscuits to vulnerable patients and were also signposted to the appropriate support services.

Are services responsive to people's needs?

The practice is rated as good for providing responsive services.

- Practice staff reviewed the needs of its local population and engaged with the NHS England Area Team and Clinical Commissioning Group to secure improvements to services where these were identified.
- Patients said they found it easy to make an appointment with a named GP and there was continuity of care, with urgent appointments available the same day.
- The practice had good facilities and was well equipped to treat patients and meet their needs.
- Information about how to complain was available and easy to understand and evidence showed the practice responded quickly to issues raised. Learning from complaints was shared with staff and other stakeholders.

Good

Are services well-led?

The practice is rated as good for being well-led.

- The practice had a clear vision and strategy to deliver high quality care and promote good outcomes for patients. Staff were clear about the vision and their responsibilities in relation to it.
- There was a clear leadership structure and staff felt supported by management. The practice had a number of policies and procedures to govern activity and held regular governance meetings.
- There was an overarching governance framework which supported the delivery of the strategy and good quality care. This included arrangements to monitor and improve quality and identify risk.
- The provider was aware of and complied with the requirements of the duty of candour. The partners encouraged a culture of openness and honesty. The practice had systems in place for notifiable safety incidents and ensured this information was shared with staff to ensure appropriate action was taken
- The practice proactively sought feedback from staff and patients, which it acted on. The patient participation group was active.

Good

Summary of findings

- There was a strong focus on continuous learning and improvement at all levels.

Summary of findings

The six population groups and what we found

We always inspect the quality of care for these six population groups.

Older people

The practice is rated as good for the care of older people.

- The practice offered proactive, personalised care to meet the needs of the older people in its population.
- The practice was responsive to the needs of older people, and offered home visits and urgent appointments for those with enhanced needs.
- An alert on patient records highlighted elderly patients who were particularly vulnerable.

Good

People with long term conditions

The practice is rated as good for the care of people with long-term conditions.

- Nursing staff had lead roles in chronic disease management and patients at risk of hospital admission were identified as a priority.
- There were alerts for long term conditions on patient records.
- The percentage of patients with diabetes, on the register, whose last measured total cholesterol (measured within the preceding 12 months) is 5 mmol/l or less (01/04/2015 to 31/03/2016) was 73% comparable to the CCG average of 74% and the national average of 80%.
- Longer appointments and home visits were available when needed.
- All these patients had a named GP and a structured annual review to check their health and medicines needs were being met. For those patients with the most complex needs, the named GP worked with relevant health and care professionals to deliver a multidisciplinary package of care.
- The practice had online appointment booking and prescription requests.
- The practice had a palliative care register and all these patients had care plans.

Good

Families, children and young people

The practice is rated as good for the care of families, children and young people.

Good

Summary of findings

- There were systems in place to identify and follow up children living in disadvantaged circumstances and who were at risk, for example, children and young people who had a high number of A&E attendances. Immunisation rates were relatively high for all standard childhood immunisations.
- Patients told us that children and young people were treated in an age-appropriate way and were recognised as individuals, and we saw evidence to confirm this.
- At 89%, the percentage of women aged 25-64 whose notes record that a cervical screening test has been performed in the preceding 5 years (01/04/2014 to 31/03/2015) was above the CCG and national averages of 78% and 82%.
- Appointments were available outside of school hours and the premises were suitable for children and babies. Children and babies were prioritised for same day appointments.
- We saw positive examples of joint working with midwives and health visitors.
- The practice was involved in a children's clinic pilot focussing on a range of health and social factors that affected them.

Working age people (including those recently retired and students)

The practice is rated as good for the care of working-age people (including those recently retired and students).

- The needs of the working age population, those recently retired and students had been identified and the practice had adjusted the services it offered to ensure these were accessible, flexible and offered continuity of care.
- The practice was proactive in offering online services as well as a full range of health promotion and screening that reflects the needs for this age group.
- Same day appointments were available.
- The practice was open from 8am to 7.30pm Monday and Tuesday to accommodate working people.
- Telephone consultations were available.
- Online appointment booking and prescription requests was available.

Good

People whose circumstances may make them vulnerable

The practice is rated as good for the care of people whose circumstances may make them vulnerable.

Good

Summary of findings

- The practice held a register of patients living in vulnerable circumstances including those with a learning disability. There was also an alert on the patient records where a patient was identified as vulnerable.
- The practice offered longer appointments for patients with a learning disability.
- The practice regularly worked with other health care professionals in the case management of vulnerable patients.
- The practice informed vulnerable patients about how to access various support groups and voluntary organisations.
- Staff knew how to recognise signs of abuse in vulnerable adults and children. Staff were aware of their responsibilities regarding information sharing, documentation of safeguarding concerns and how to contact relevant agencies in normal working hours and out of hours.

People experiencing poor mental health (including people with dementia)

The practice is rated as good for the care of people experiencing poor mental health (including people with dementia).

- 85% of patients with schizophrenia, bipolar affective disorder and other psychoses had a comprehensive, agreed care plan documented in the record, in the preceding 12 months (01/04/2014 to 31/03/2015), which was above the CCG average of 83% and comparable to the national average of 88%.
- Patients with severe mental health conditions were offered weekly appointments with a named GP.
- The practice regularly worked with multi-disciplinary teams in the case management of patients experiencing poor mental health, including those with dementia.
- The practice carried out advance care planning for patients with dementia.
- The practice had told patients experiencing poor mental health about how to access various support groups and voluntary organisations.
- The practice had a system in place to follow up patients who had attended accident and emergency where they may have been experiencing poor mental health.
- Staff had a good understanding of how to support patients with mental health needs and dementia.

Good

Summary of findings

What people who use the service say

The national GP patient survey results were published on 6 January 2016. The results showed the practice was performing in line with local and national averages. 343 survey forms were distributed and 112 were returned. This represented a 32% response rate compared to the England average of 38%. This represented 3.6% of the patient list.

- 79% of patients found it easy to get through to this practice by phone compared to the national average of 73%.
- 74% of patients were able to get an appointment to see or speak to someone the last time they tried compared to the national average of 76%.

- 74% of patients said they would recommend this GP practice to someone who has just moved to the local area compared to the national average of 79%.

As part of our inspection we also asked for CQC comment cards to be completed by patients prior to our inspection. We received 22 comment cards which were all positive about the standard of care received. Patients commented on the kind and caring nature of all staff and stated that they were treated with dignity and respect. Two comment cards were neutral.

Areas for improvement

Action the service **SHOULD** take to improve

- Improve the identification of carers to ensure their needs are known and can be met.

Dr Jerome Kaine Ikwueke

Detailed findings

Our inspection team

Our inspection team was led by:

Our inspection team was led by a CQC Lead Inspector and included a GP specialist adviser.

Background to Dr Jerome Kaine Ikwueke

Dr Jerome Kaine Ikwueke's practice provides services to 3095 patients under a Personal Medical Services contract (an agreement between NHS England and general practices for delivering personal medical services). It sits within Haringey Clinical Commissioning Group (CCG). The practice provides a number of enhanced services including Childhood Vaccination and Immunisation Scheme; Facilitating Timely Diagnosis and Support for People with Dementia; Influenza and Pneumococcal Immunisations; Learning Disabilities and Patient Participation.

The practice staff includes three GP Partners, which included two male GP completing five sessions a week and seven sessions a week, a female GP completing four sessions a week, a female practice nurse completing two sessions a week, a health care assistant completing five sessions a week, a full time practice manager and a team of reception/administrative staff.

The practice was open Monday to Friday 8am to 1pm Monday to Friday and then from 1.30pm to 7.30pm on Monday and Tuesday and to 6.30pm on Wednesday and Friday and closed at 1pm on Thursday. Outside of these hours, cover was provided by the out of hours GP service which operated from 6.30pm to 8am, seven days a week and the NHS 111 service.

The provider is registered with the Care Quality Commission as an individual, to carry on the regulated activities of maternity and midwifery services, treatment of disease, disorder or injury, and diagnostic and screening procedures.

Dr Jerome Kaine Ikwueke's practice is one of a number of GPs covered by Haringey Clinical Commissioning Group (CCG). Haringey is in the second most deprived decile. The practice has significantly more females aged between 45 to 49 than national average and less males over 80.

Why we carried out this inspection

We carried out a comprehensive inspection of this service under Section 60 of the Health and Social Care Act 2008 as part of our regulatory functions. The inspection was planned to check whether the provider is meeting the legal requirements and regulations associated with the Health and Social Care Act 2008, to look at the overall quality of the service, and to provide a rating for the service under the Care Act 2014.

The practice had not been inspected before.

How we carried out this inspection

Before visiting, we reviewed a range of information we hold about the practice and asked other organisations to share what they knew. We carried out an announced visit on 9 January 2017. During our visit we:

- Spoke with a range of staff including GPs and reception/administrative staff and spoke with patients who used the service.

Detailed findings

- Observed how patients were being cared for and talked with carers and/or family members
- Reviewed an anonymised sample of the personal care or treatment records of patients.
- Reviewed comment cards where patients and members of the public shared their views and experiences of the service.

To get to the heart of patients' experiences of care and treatment, we always ask the following five questions:

- Is it safe?
- Is it effective?
- Is it caring?
- Is it responsive to people's needs?
- Is it well-led?

We also looked at how well services were provided for specific groups of people and what good care looked like for them. The population groups are:

- Older people
- People with long-term conditions
- Families, children and young people
- Working age people (including those recently retired and students)
- People whose circumstances may make them vulnerable
- People experiencing poor mental health (including people with dementia).

Please note that when referring to information throughout this report, for example any reference to the Quality and Outcomes Framework data, this relates to the most recent information available to the CQC at that time.

Are services safe?

Our findings

Safe track record and learning

There was an effective system in place for reporting and recording significant events.

- Staff told us they would inform the practice manager of any incidents and there was a recording form available on the practice's computer system. The incident recording form supported the recording of notifiable incidents under the duty of candour. (The duty of candour is a set of specific legal requirements that providers of services must follow when things go wrong with care and treatment).
- We saw evidence that when things went wrong with care and treatment, patients were informed of the incident, received reasonable support, truthful information, a written apology and were told about any actions to improve processes to prevent the same thing happening again.
- The practice carried out a thorough analysis of the significant events.

We reviewed safety records, incident reports, patient safety alerts and minutes of meetings where these were discussed. We saw evidence that lessons were shared and action was taken to improve safety in the practice. For example, following an incident where a patient required medical assistance whilst waiting to be seen, the incident was discussed and the opportunity to reflect was given to all staff. The incident was discussed at the weekly clinicians' meeting as well as the monthly practice meeting.

National patient safety alerts were disseminated by email and discussed in clinical meetings and then placed onto the practice computer system, which all staff had access to. We saw that the practice had responded to Medicines and Healthcare Products Regulatory Agency (MHRA) alerts to ensure best practice.

Overview of safety systems and processes

The practice had clearly defined and embedded systems, processes and practices in place to keep patients safe and safeguarded from abuse, which included:

- Arrangements were in place to safeguard children and vulnerable adults from abuse. These arrangements reflected relevant legislation and local requirements.

Policies were accessible to all staff. The policies clearly outlined who to contact for further guidance if staff had concerns about a patient's welfare. There were two lead GPs for safeguarding. The GPs attended safeguarding meetings when possible and always provided reports where necessary for other agencies. The health visitor was met with every six weeks and all children on the child protection register were discussed as well as all newly registered children under four years old. Staff demonstrated they understood their responsibilities and all had received training on safeguarding children and vulnerable adults relevant to their role. GPs were trained to child protection or child safeguarding level 3. The practice nurse was trained to level 2 and the healthcare assistants were trained to level 1. Non-clinical staff were trained to level 1.

- A notice in the waiting room and consulting rooms advised patients that chaperones were available if required. Information about chaperones was available in the practice leaflet. All three non-clinical members of staff who acted as chaperones were trained for the role and had received a Disclosure and Barring Service (DBS) check. (DBS checks identify whether a person has a criminal record or is on an official list of people barred from working in roles where they may have contact with children or adults who may be vulnerable).
- The practice maintained appropriate standards of cleanliness and hygiene. We observed the premises to be clean and tidy. The lead GP was the infection control clinical lead who liaised with the local infection prevention teams to keep up to date with best practice. There was an infection control protocol in place and staff had received up to date training. Annual infection control audits were undertaken. The most recent was in February 2016. We saw evidence that action was taken to address any improvements identified as a result.
- The arrangements for managing medicines, including emergency medicines and vaccines, in the practice kept patients safe (including obtaining, prescribing, recording, handling, storing, security and disposal). Processes were in place for handling repeat prescriptions which included the review of high risk medicines. Prescription pads were kept in a locked cupboard in reception and pad numbers were logged in

Are services safe?

on receipt and out when taken by GP or nurse. The practice manager checked uncollected prescriptions weekly. Prescriptions which were older than one week were returned to the GP to follow up with the patient.

- The practice carried out regular medicines audits, with the support of the local CCG pharmacy teams, to ensure prescribing was in line with best practice guidelines for safe prescribing. Blank prescription forms and pads were securely stored and there were systems in place to monitor their use. Patient Group Directions had been adopted by the practice to allow nurses to administer medicines in line with legislation. Health Care Assistants were trained to administer vaccines and medicines against a patient specific prescription or direction from a prescriber.
- We reviewed two personnel files and found appropriate recruitment checks had been undertaken prior to employment. For example, proof of identification, references, qualifications, registration with the appropriate professional body and the appropriate checks through the Disclosure and Barring Service.

Monitoring risks to patients

Risks to patients were assessed and well managed.

- There were procedures in place for monitoring and managing risks to patient and staff safety. There was a health and safety policy available with a poster in the reception office which identified local health and safety representatives. The practice had a up to date fire risk assessments and ensured regular fire drills were carried out.
- All electrical equipment was checked to ensure the equipment was safe to use and clinical equipment was checked to ensure it was working properly. The last test was carried out in March 2015. The practice had a variety of other risk assessments in place to monitor safety of the premises such as control of substances hazardous

to health and infection control and legionella (Legionella is a term for a particular bacterium which can contaminate water systems in buildings), which was last completed in November 2015.

- Arrangements were in place for planning and monitoring the number of staff and mix of staff needed to meet patients' needs. There was a rota system in place for all the different staffing groups to ensure enough staff were on duty. Cover for sickness, holidays and busy periods was provided in house. No locums had been used within the previous year.

Arrangements to deal with emergencies and major incidents

The practice had adequate arrangements in place to respond to emergencies and major incidents.

- There was an instant messaging system on the computers in all the consultation and treatment rooms which alerted staff to any emergency.
- All staff received annual basic life support training and there were emergency medicines available in the treatment room.
- The practice had a defibrillator available on the premises and oxygen with adult and children's masks. A first aid kit and accident book were available.
- Emergency medicines were easily accessible to staff in a secure area of the practice and all staff knew of their location. All the medicines we checked were in date and stored securely.
- The practice had a comprehensive business continuity plan in place for major incidents such as power failure or building damage. They had a buddy system with another practice within a 5 minute walk of the practice. The plan included emergency contact numbers for staff. Copies were available on the practice's computer system and in the employee handbook.

Are services effective?

(for example, treatment is effective)

Our findings

Effective needs assessment

The practice assessed needs and delivered care in line with relevant and current evidence based guidance and standards, including National Institute for Health and Care Excellence (NICE) best practice guidelines.

- The practice had systems in place to keep all clinical staff up to date. Staff had access to guidelines from NICE and used this information to deliver care and treatment that met patients' needs.
- The practice monitored that these guidelines were followed through risk assessments, audits and random sample checks of patient records.
- Clinical staff attended protected time initiatives funded by the CCG. They also attended locality meetings which were attended by other local practices. Clinical guidelines and protocols were discussed at both of these meetings. All clinicians fed back summaries of learning from all events they attended at practice meetings.

Management, monitoring and improving outcomes for people

The practice used the information collected for the Quality and Outcomes Framework (QOF) and performance against national screening programmes to monitor outcomes for patients. (QOF is a system intended to improve the quality of general practice and reward good practice). The most recent published results were 95% of the total number of points available. Exception reporting was at 4.3% which was discussed with the practice. (Exception reporting is the removal of patients from QOF calculations where, for example, the patients are unable to attend a review meeting or certain medicines cannot be prescribed because of side effects).

This practice was not an outlier for any QOF (or other national) clinical targets. Data from 1 April 2014 to 31 March 2015 showed:

- The percentage of patients with diabetes, on the register, in whom the last IFCC HbA1c was 64 mmol/mol or less in the preceding 12 months (01/04/2015 to 31/03/2016) was 61% comparable to the CCG average of 72% and national average of 78%.

- The percentage of patients with diabetes, on the register, in whom the last blood pressure reading (measured in the preceding 12 months) was 140/80 mmHg or less (01/04/2015 to 31/03/2016) was 64% comparable to the CCG average of 73% and national average of 77%.
- The percentage of patients with diabetes, on the register, whose last measured total cholesterol (measured within the preceding 12 months) was 5 mmol/l or less (01/04/2015 to 31/03/2016) was 73% comparable to the CCG average of 74% and national average of 80%.
- Performance for mental health related indicators was similar to the national average. For example, the percentage of patients with schizophrenia, bipolar affective disorder and other psychoses who have a comprehensive, agreed care plan documented in their record, in the preceding 12 months was 91% above the CCG average of 88% and comparable to the national average of 89%.
- The percentage of patients with schizophrenia, bipolar affective disorder and other psychoses whose alcohol consumption has been recorded in the preceding 12 months (01/04/2015 to 31/03/2016) was 91% above the CCG average of 88% and the national average of 89%.
- The percentage of patients diagnosed with dementia whose care plan has been reviewed in a face-to-face review in the preceding 12 months (01/04/2015 to 31/03/2016) was 100% above the CCG and national average of 83%.

There was evidence of quality improvement including clinical audit.

- There had been two clinical audits completed in the last two years, and both were completed audits where the improvements made were implemented and monitored.
- The practice participated in local audits, national benchmarking, accreditation, peer review and research.
- Findings were used by the practice to improve services. For example, recent action taken as a result included improving patient information about the assessment of breast cancer and the two week wait referrals. During the first cycle in 2015 and a review of all medical records of patients who presented to one of the GPs in the last 12 months with breast pain, breast masses or any other breast symptoms, the audit found that 24 patients had been referred to secondary care and no cases of breast

Are services effective?

(for example, treatment is effective)

cancer had been picked up despite adherence to the referral criteria. Action taken to improve diagnosis rates was to review NICE guidance. During the second cycle in December 2016, in line with NICE guidance, the practice out of 18 patients, diagnosed two patients with cancer, increasing the diagnosis rate.

Information about patients' outcomes was used to make improvements such as: improved diabetes management for patients was achieved in part through increased staff training and awareness. The practice nurse and GP completed patient checks.

Effective staffing

Staff had the skills, knowledge and experience to deliver effective care and treatment.

- The practice had an induction programme for all newly appointed staff. This covered such topics as safeguarding, infection prevention and control, fire safety, health and safety and confidentiality.
- The practice could demonstrate how they ensured role-specific training and updating for relevant staff. For example, the nurses attended regular update training in cervical screening and immunisation. All clinical staff were encouraged to attend local monthly protected education events where they received education and updates from the Clinical Commissioning Group (CCG).
- Staff administering vaccines and taking samples for the cervical screening programme had received specific training which had included an assessment of competence. Staff who administered vaccines could demonstrate how they stayed up to date with changes to the immunisation programmes, for example by access to on line resources and discussion at practice meetings.
- The learning needs of staff were identified through a system of appraisals, meetings and reviews of practice development needs. Staff had access to appropriate training to meet their learning needs and to cover the scope of their work. This included ongoing support, one-to-one meetings, coaching and mentoring, clinical supervision and facilitation and support for revalidating GPs. All staff had received an appraisal within the last 12 months.

- Staff received training that included: safeguarding, fire safety awareness, basic life support and information governance. Staff had access to and made use of e-learning training modules and in-house training.

Coordinating patient care and information sharing

The information needed to plan and deliver care and treatment was available to relevant staff in a timely and accessible way through the practice's patient record system and their intranet system.

- This included care and risk assessments, care plans, medical records and investigation and test results.
- The practice shared relevant information with other services in a timely way, for example when referring patients to other services.

Staff worked together and with other health and social care professionals to understand and meet the range and complexity of patients' needs and to assess and plan ongoing care and treatment. This included when patients moved between services, including when they were referred, or after they were discharged from hospital. For example, where a vulnerable patient was to be discharged from hospital, the practice notified the community matron who visited the patient in hospital and arranged a home care package in the community before discharge. If children and adults attended the accident and emergency department the practice recalled these patients in for a full review.

A number of multi-disciplinary team (MDT) meetings took place, for example the practice met with the health visitor on a six weekly basis and reviewed children on the child protection register and all new registrations for under four year olds. Weekly teleconference calls with the consultants from North Middlesex Hospital took place to discuss the avoidance of unplanned admissions. Palliative care teleconference meetings took place with McMillian nurses on a regular basis.

Consent to care and treatment

Staff sought patients' consent to care and treatment in line with legislation and guidance.

- Staff understood the relevant consent and decision-making requirements of legislation and guidance, including the Mental Capacity Act 2005.

Are services effective?

(for example, treatment is effective)

- When providing care and treatment for children and young people, staff carried out assessments of capacity to consent in line with relevant guidance.
- Where a patient's mental capacity to consent to care or treatment was unclear the GP or practice nurse assessed the patient's capacity and, recorded the outcome of the assessment.
- The process for seeking consent was monitored through patient records audits.

Supporting patients to live healthier lives

The practice identified patients who may be in need of extra support. For example:

- Patients receiving end of life care, carers, those at risk of developing a long-term condition and those requiring advice on their diet, smoking and alcohol cessation and substance misuse. Patients were seen in specialist clinics run by the practice itself or were signposted to the relevant local service.
- The practice provided dietary advice and the practice ran a smoking cessation clinic from its premises.
- Patients identified as requiring extra support were flagged on the computer system and prioritised for appointments.

The practice's uptake for the cervical screening programme was 89%, which was comparable to the CCG average of 78% and the national average of 81%. There was a policy to offer telephone reminders for patients who did not attend

for their cervical screening test. The practice demonstrated how they encouraged uptake of the screening programme by using information in different languages and for those with a learning disability and they ensured a female sample taker was available. The practice also encouraged its patients to attend national screening programmes for bowel and breast cancer screening. There were failsafe systems in place to ensure results were received for all samples sent for the cervical screening programme and the practice followed up women who were referred as a result of abnormal results.

Childhood immunisation rates for the vaccinations given were comparable to CCG/national averages. For example, childhood immunisation rates for the vaccinations given to under two year olds ranged from 78% to 90% and five year olds from 80% to 80%.

Patients had access to appropriate health assessments and checks. These included health checks for new patients and NHS health checks for patients aged 40–74. The practice manager kept lists of patients with conditions such as learning disabilities, mental health and long term conditions. This included the dates reviews were due and whether a referral had been made if the patient had failed to attend their review. Appropriate follow-ups for the outcomes of health assessments and checks were made, where abnormalities or risk factors were identified.

Are services caring?

Our findings

Kindness, dignity, respect and compassion

We observed members of staff were courteous and very helpful to patients and treated them with dignity and respect.

- Curtains were provided in consulting rooms to maintain patients' privacy and dignity during examinations, investigations and treatments.
- We noted that consultation and treatment room doors were closed during consultations; conversations taking place in these rooms could not be overheard.
- Reception staff knew when patients wanted to discuss sensitive issues or appeared distressed they could offer them a private room to discuss their needs.

We received 22 patient Care Quality Commission comment cards and 20 were positive about the service experienced. Patients said they felt the practice offered an excellent service and staff were helpful, caring and treated them with dignity and respect. Two comment cards were neutral.

We spoke with four members, including the chair of the patient participation group (PPG). There were at least 20 members. The group met every three months, the GP, practice manager and the reception staff attended. The group members said the staff listened and encouraged patients to complain and were open with patients. They also told us they were satisfied with the care provided by the practice and said their dignity and privacy was respected.

The practice also provided a taxi service which they paid for to older patients vulnerable patients to ensure they arrived and departed the practice safely. They also provided food, such as tea and biscuits to vulnerable patients and were also signposted to the appropriate support services.

Results from the national GP patient survey showed patients felt they were treated with compassion, dignity and respect. The practice's achievement was in line with CCG and national averages for its satisfaction scores on consultations with GPs and nurses. For example:

- 86% of patients said the GP was good at listening to them compared to the clinical commissioning group (CCG) average of 84% and the national average of 89%.

- 85% of patients said the GP gave them enough time compared to the CCG average of 80% and the national average of 86%.
- 84% of patients said they had confidence and trust in the last GP they saw compared to the CCG average of 87% and the national average of 92%.
- 83% of patients said the last GP they spoke to was good at treating them with care and concern compared to the national average of 85%.
- 80% of patients said the last nurse they spoke to was good at treating them with care and concern compared to the national average of 91%.
- 91% of patients said they found the receptionists at the practice helpful compared to the CCG average of 84% and the national average of 87%.

Care planning and involvement in decisions about care and treatment

Patients told us they felt involved in decision making about the care and treatment they received. They also told us they felt listened to and supported by staff and had sufficient time during consultations to make an informed decision about the choice of treatment available to them. Patient feedback from the comment cards we received was also positive and aligned with these views. We also saw that care plans were personalised.

Results from the national GP patient survey showed patients responded positively to questions about their involvement in planning and making decisions about their care and treatment. Results were in line with national averages. For example:

- 87% of patients said the last GP they saw was good at explaining tests and treatments above the national average of 86%.
- 79% of patients said the last GP they saw was good at involving them in decisions about their care compared to the national average of 82%.
- 80% of patients said the last nurse they saw was good at involving them in decisions about their care compared to the national average of 85%.

The practice provided facilities to help patients be involved in decisions about their care:

Are services caring?

- Staff told us that translation services were available for patients who did not have English as a first language. We saw notices in the reception areas informing patients this service was available and informing patients that the reception team spoke seven languages between them and to ask for assistance if required.
- Information leaflets were available in easy read format.

Patient and carer support to cope emotionally with care and treatment

Patient information leaflets and notices were available in the patient waiting area which told patients how to access a number of support groups and organisations. Information about support groups was also available on the practice website.

The practice's computer system alerted GPs if a patient was also a carer. The practice had identified 13 patients as carers (below 1% of the practice list). A poster on display in the waiting area advised patients to identify themselves to the practice if they were carers. Patients who were carers were flagged on the practice's computer system and prioritised for appointments where necessary. Written information was available to direct carers to the various avenues of support available to them.

Staff told us that if families had suffered bereavement, their usual GP contacted them or sent them a sympathy card. This call was either followed by a patient consultation at a flexible time and location to meet the family's needs and/or by giving them advice on how to find a support service.

Are services responsive to people's needs?

(for example, to feedback?)

Our findings

Responding to and meeting people's needs

The practice reviewed the needs of its local population and engaged with the NHS England Area Team and Clinical Commissioning Group (CCG) to secure improvements to services where these were identified. For example, for the CCG health watch assessment the practice ranked in the top three out of the 39 practices in Haringey.

- The practice offered evening appointments until 7.30pm on Monday and Tuesday for working patients who could not attend during normal opening hours.
- There were longer appointments available for patients with a learning disability.
- Home visits were available for older patients and patients who had clinical needs which resulted in difficulty attending the practice.
- Same day appointments were available for children and those patients with medical problems that require same day consultation.
- Patients were able to receive travel vaccinations available on the NHS as well as those only available privately.
- There were disabled facilities, a hearing loop and translation services available. Six members of the reception team also spoke a number of languages and helped patients with translation if required.

Access to the service

The practice was open from 8am to 1pm Monday to Friday and then from 1.30pm to 7.30pm on Monday and Tuesday and to 6.30pm on Wednesday and Friday and closed at 1pm on Thursday. In addition to pre-bookable appointments that could be booked up to four weeks in advance, urgent appointments were also available for people that needed them. Outside of these hours, cover was provided by the out of hours GP service which operated from 6.30pm to 8am, seven days a week and the NHS 111 service. Information about out of hours services was available in the practice leaflet and was on display in the reception area.

Results from the national GP patient survey showed that patient's satisfaction with how they could access care and treatment was comparable to national averages.

- 82% of patients were satisfied with the practice's opening hours above the national average of 76%.
- 79% of patients said they could get through easily to the practice by phone above the national average of 73%.

People told us on the day of the inspection that they were able to get appointments when they needed them.

The practice had a system in place to assess:

- whether a home visit was clinically necessary; and
- the urgency of the need for medical attention.

Patients who required a home visit were advised to contact the practice before 10am. The GP would then contact the patient or carer in advance to gather information to allow for an informed decision to be made on prioritisation according to clinical need. In cases where the urgency of need was so great that it would be inappropriate for the patient to wait for a GP home visit, alternative emergency care arrangements were made. The practice advised that children should be brought in to the practice as they would be prioritised for appointments rather than waiting for a home visit. Clinical and non-clinical staff were aware of their responsibilities when managing requests for home visits.

Listening and learning from concerns and complaints

The practice had an effective system in place for handling complaints and concerns.

- Its complaints policy and procedures were in line with recognised guidance and contractual obligations for GPs in England.
- The practice manager was the designated responsible person who handled all complaints in the practice.
- We saw that information was available to help patients understand the complaints system. For example, information was available in the practice leaflet which was on display and given to new patients. A comments and complaints box was in reception.

We looked at nine complaints received in the last 12 months and found these were satisfactorily handled, dealt with in a timely way and with openness and transparency. Lessons were learnt from individual concerns and complaints and also from analysis of trends and action was taken as a result to improve the quality of care. For example, in response to a complaint about one of the GP's

Are services responsive to people's needs? (for example, to feedback?)

clinical decision, the patient was written to with a clear description of why the decision was made and invitations were made to invite the patient in for further explanation and discussion. The complaint and learning was discussed at a practice meeting.

Are services well-led?

Good 

(for example, are they well-managed and do senior leaders listen, learn and take appropriate action)

Our findings

Vision and strategy

The practice had a clear vision to deliver high quality care and promote good outcomes for patients.

- The practice's mission statement was to work in a responsive, supportive and courteous manner in a spirit of co-operation with patients and embed the ethos of 'Every Child Matters' within the practice. The practice aimed to treat all patients by striving continually to provide the best possible healthcare services.
- The practice had a robust strategy and supporting business plans which reflected the vision and values and were regularly monitored.

Governance arrangements

The practice had an overarching governance framework which supported the delivery of the strategy and good quality care. This outlined the structures and procedures in place and ensured that:

- There was a clear staffing structure and that staff were aware of their own roles and responsibilities.
- Practice specific policies were implemented and were available to all staff.
- A comprehensive understanding of the performance of the practice was maintained.
- A programme of continuous clinical and internal audit was used to monitor quality and to make improvements.
- There were arrangements for identifying, recording and managing risks, issues and implementing mitigating actions.

Leadership and culture

On the day of inspection the partners in the practice demonstrated they had the experience, capacity and capability to run the practice and ensure high quality care. They told us they prioritised safe and compassionate care. Staff told us the partners were approachable and always took the time to listen to all members of staff.

The provider was aware of and had systems in place to ensure compliance with the requirements of the duty of candour. (The duty of candour is a set of specific legal

requirements that providers of services must follow when things go wrong with care and treatment). This included support training for all staff on communicating with patients about notifiable safety incidents. The partners encouraged a culture of openness and honesty. The practice had systems in place to ensure that when things went wrong with care and treatment:

- The practice gave affected people reasonable support, truthful information and a verbal and written apology.
- The practice kept written records of verbal interactions as well as written correspondence.

There was a clear leadership structure in place and staff felt supported by management.

- Staff told us the practice held regular team meetings.
- Staff told us there was an open culture within the practice and they had the opportunity to raise any issues at team meetings and felt confident and supported in doing so.
- Staff said they felt respected, valued and supported. All staff were involved in discussions about how to run and develop the practice, and the partners encouraged all members of staff to identify opportunities to improve the service delivered by the practice.
- Staff were encouraged to develop in their careers and were well supported by the practice management to do so. For example, staff were supported to attend training courses and further their skills.

Seeking and acting on feedback from patients, the public and staff

The practice encouraged and valued feedback from patients, the public and staff. It proactively sought patients' feedback and engaged patients in the delivery of the service.

- The practice had gathered feedback from patients through the participation group (PPG) and through surveys and complaints received. The PPG were sent practice correspondence regularly and submitted proposals for improvements to the practice management team.
- The practice had gathered feedback from staff through staff meetings, appraisals and discussion. Staff told us

Are services well-led?

Good 

(for example, are they well-managed and do senior leaders listen, learn and take appropriate action)

they would not hesitate to give feedback and discuss any concerns or issues with colleagues and management. Staff told us they felt involved and engaged to improve how the practice was run.

Continuous improvement

There was a focus on continuous learning and improvement at all levels within the practice. The practice team was forward thinking and part of local pilot schemes to improve outcomes for patients in the area. Examples included pilots which focussed on increasing safeguarding awareness and on improving patient's health.
