Inspection Report

9-13 Leeds Road
Shipley
West Yorkshire
BD18 1BP
Tel: 01274 590777
Website: www.carnegieclinic.com

Date of inspection visit: 28 February 2017
Date of publication: 20/04/2017

Overall summary

We carried out an announced comprehensive inspection on 28 February 2017 to ask the practice the following key questions; Are services safe, effective, caring, responsive and well-led?

Our findings were:

Are services safe?

We found that this practice was providing safe care in accordance with the relevant regulations.

Are services effective?

We found that this practice was providing effective care in accordance with the relevant regulations.

Are services caring?

We found that this practice was providing caring services in accordance with the relevant regulations.

Are services responsive?

We found that this practice was providing responsive care in accordance with the relevant regulations.

Are services well-led?

We found that this practice was providing well-led care in accordance with the relevant regulations.

Background

The Carnegie Clinic is situated in Shipley, West Yorkshire. The practice provides dental treatment to adults and children on an NHS or privately funded basis. The services include preventative advice and treatment and routine restorative dental care.

The practice has four surgeries, a decontamination room, two waiting areas and a reception area. There are two surgeries, a waiting area, the reception area and accessible toilet facilities on the ground floor. The other two surgeries and the second waiting area are on the second floor.

There are three dentists, three dental hygiene therapists, one dental hygienist, six dental nurses (two of whom are trainees), one receptionist and a practice manager.

The opening hours are Monday from 9:00am to 7:00pm, Tuesday and Friday from 8:00am to 4:00pm and Wednesday and Thursday from 10:00am to 7:00pm.

The practice manager is the registered manager. A registered manager is a person who is registered with the Care Quality Commission to manage the service. Like registered providers, they are 'registered persons'. Registered persons have legal responsibility for meeting the requirements in the Health and Social Care Act 2008 and associated Regulations about how the practice is run.

During the inspection we received feedback from 33 patients. The patients were positive about the care and

Summary of findings

treatment they received at the practice. Comments included staff were polite, considerate and helpful. They also commented that it was easy to book an appointment and they were made to feel at ease and the practice is clean and hygienic.

Our key findings were:

- The practice was visibly clean and uncluttered.
- The practice had systems in place to assess and manage risks to patients and staff including health and safety and the management of medical emergencies.
- Staff were qualified and had received training appropriate to their roles.
- Patients were involved in making decisions about their treatment and were given clear explanations about their proposed treatment including costs, benefits and risks.
- Dental care records showed treatment was planned in line with current best practice guidelines.
- Oral health advice and treatment were provided in-line with the 'Delivering Better Oral Health' toolkit (DBOH).
- We observed patients were treated with kindness and respect by staff.
- Staff ensured there was sufficient time to explain fully the care and treatment they were providing in a way patients understood.

- The practice had a complaints system in place and there was an openness and transparency in how these were dealt with.
- Patients were able to make routine and emergency appointments when needed.
- The governance systems were effective.
- There were clearly defined leadership roles within the practice and staff told us they felt supported, appreciated and comfortable to raise concerns or make suggestions.

There were areas where the provider could make improvements and should:

- Review the practice's arrangements for receiving and responding to patient safety alerts, recalls and rapid response reports issued from the Medicines and Healthcare products Regulatory Agency (MHRA) and through the Central Alerting System (CAS), as well as from other relevant bodies such as, Public Health England (PHE).
- Review staff awareness of the practice's safeguarding policy and procedures and ensure all staff are aware of their responsibilities.
- Review the practice's process for risk assessing new members of staff who have not yet completed a full course of Hepatitis B vaccinations.
- Review the practice's process for monitoring referrals.

Summary of findings

The five questions we ask about services and what we found

We always ask the following five questions of services.

Are services safe?

We found that this practice was providing safe care in accordance with the relevant regulations.

Staff told us they felt confident about reporting incidents and accidents. There was an effective system for the analysis of such events and they were discussed at practice meetings. We noted some MHRA alerts had not been received.

Staff had received training in safeguarding at the appropriate level and knew the signs of abuse. There was some uncertainty amongst staff of which external organisations to report safeguarding concerns.

Staff were suitably qualified for their roles and the practice had undertaken the relevant recruitment checks to ensure patient safety. The practice had not put in risk assessments for staff that had not completed a full course of Hepatitis B vaccination.

Staff were trained to deal with medical emergencies. All emergency equipment and medicines were in date and in accordance with the British National Formulary (BNF) and Resuscitation Council UK guidelines.

The decontamination procedures were effective and the equipment involved in the decontamination process was regularly serviced, validated and checked to ensure it was safe to use.

No
action

Are services effective?

We found that this practice was providing effective care in accordance with the relevant regulations.

Patients' dental care records provided comprehensive information about their current dental needs and past treatment. The practice monitored any changes to the patient's oral health and provided treatment when appropriate.

The practice followed best practice guidelines when delivering dental care. These included Faculty of General Dental Practice (FGDP), National Institute for Health and Care Excellence (NICE) and guidance from the British Society of Periodontology (BSP). The practice focused strongly on prevention and the dentists were aware of the 'Delivering Better Oral Health' toolkit (DBOH) with regards to fluoride application and oral hygiene advice.

Staff were encouraged to complete training relevant to their roles and this was monitored by the practice manager. The clinical staff were up to date with their continuing professional development (CPD).

Referrals were made to secondary care services if the treatment required was not provided by the practice. There was no process in place to actively monitor referrals which had been sent.

No
action

Are services caring?

We found that this practice was providing caring services in accordance with the relevant regulations.

During the inspection we received feedback from 33 patients. The patients commented staff were polite, considerate and helpful.

We observed the staff to be welcoming and caring towards the patients.

We observed privacy and confidentiality were maintained for patients using the service on the day of the inspection.

No
action

Summary of findings

Staff explained that enough time was allocated in order to ensure that the treatment and care was fully explained to patients in a way which they understood.

Are services responsive to people's needs?

We found that this practice was providing responsive care in accordance with the relevant regulations.

The practice had an efficient appointment system in place to respond to patients' needs. There were vacant appointments slots for urgent or emergency appointments each day.

Patients commented they could access treatment for urgent and emergency care when required. There were clear instructions for patients requiring urgent care when the practice was closed.

There was a procedure in place for responding to patients' complaints. This involved acknowledging, investigating and responding to individual complaints or concerns. Staff were familiar with the complaints procedure.

The practice had made reasonable adjustments to enable wheelchair users or patients with limited mobility to access treatment.

**No
action**

Are services well-led?

We found that this practice was providing well-led care in accordance with the relevant regulations.

There was a clearly defined management structure in place and all staff felt supported and appreciated in their own particular roles. The practice manager was responsible for the day to day running of the practice.

Effective arrangements were in place to share information with staff by means of monthly practice meetings which were well minuted for those staff unable to attend.

The practice regularly audited clinical and non-clinical areas as part of a system of continuous improvement and learning.

They conducted patient satisfaction surveys, were currently undertaking the NHS Friends and Family Test (FFT) and there was a comments box for patients to make suggestions to the practice.

**No
action**

The Carnegie Clinic

Detailed findings

Background to this inspection

We carried out this inspection under Section 60 of the Health and Social Care Act 2008 as part of our regulatory functions. This inspection was planned to check whether the registered provider was meeting the legal requirements and regulations associated with the Health and Social Care Act 2008.

The inspection was led by a CQC inspector who was supported by a specialist dental adviser.

We informed the local NHS England area team that we were inspecting the practice. We did not receive any information of concern from them.

We spoke with two dentists, two dental nurses, the receptionist and the practice manager. To assess the quality of care provided we looked at practice policies and protocols and other records relating to the management of the service.

To get to the heart of patients' experiences of care and treatment, we always ask the following five questions:

- Is it safe?
- Is it effective?
- Is it caring?
- Is it responsive to people's needs?
- Is it well-led?

These questions therefore formed the framework for the areas we looked at during the inspection.

Are services safe?

Our findings

Reporting, learning and improvement from incidents

The practice had clear guidance for staff about how to report incidents and accidents. Staff were familiar with the importance of reporting significant events. We reviewed the significant events which had occurred in the last 12 months. These had been well documented and analysed. Any accidents or incidents would be reported to the practice manager and would also be discussed at staff meetings in order to disseminate learning.

The practice manager understood the Reporting of Injuries, Diseases and Dangerous Occurrences Regulations 2013 (RIDDOR).

Staff told us they were aware of the need to be open, honest and apologetic to patients if anything was to go wrong; this is in accordance with the Duty of Candour principle.

The practice had a process in place to receive national patient safety and medicines alerts from the Medicines and Healthcare Products Regulatory Authority (MHRA) and through the Central Alerting System (CAS). We noted there were some missing from the folder where they were stored. The practice manager told us this process would be reviewed to ensure all alerts were received.

Reliable safety systems and processes (including safeguarding)

The practice had child and adult safeguarding policies and procedures in place. These provided staff with information about identifying, reporting and dealing with suspected abuse. The policies were readily available to staff. Staff had access to contact details for both child protection and adult safeguarding teams. The practice manager was the safeguarding lead for the practice and had undertaken level three safeguarding training. All other staff had undertaken level two safeguarding training. We discussed the reporting process if a member of staff was concerned about a child. Not all staff were aware of the most appropriate organisation to contact in the event of a safeguarding issue. This was raised on the day of inspection and we were told refresher training would be completed.

We spoke with staff about the use of safer sharps in dentistry as per the Health and Safety (Sharp Instruments in Healthcare) Regulations 2013. A safer sharps system had been implemented at the practice.

The dentists told us they routinely used a rubber dam when providing root canal treatment to patients in line with guidance from the British Endodontic Society. A rubber dam is a thin, rectangular sheet, usually latex rubber, used in dentistry to isolate the operative site from the rest of the mouth and protect the airway. Rubber dams should be used when endodontic treatment is being provided. On the rare occasions when it is not possible to use rubber dam the reasons is recorded in the patient's dental care records giving details as to how the patient's safety was assured.

The practice had a whistleblowing policy which staff were aware of. Staff told us they felt confident they could raise concerns about colleagues without fear of recriminations.

We saw patients' clinical records were computerised and password protected to keep personal details safe. Any paper documentation relating to patients' records were stored in lockable cabinets.

Medical emergencies

The practice had procedures in place which provided staff with clear guidance about how to deal with medical emergencies. Staff were knowledgeable about what to do in a medical emergency and had completed training in emergency resuscitation and basic life support within the last 12 months.

The practice kept an emergency resuscitation kit, medical emergency oxygen and emergency medicines. Staff knew where the emergency kits was kept. We checked the emergency equipment and medicines and found them to be in date and in line with the Resuscitation Council UK guidelines and the BNF.

The practice had an Automated External Defibrillator (AED) to support staff in a medical emergency. (An AED is a portable electronic device that analyses life threatening irregularities of the heart and delivers an electrical shock to attempt to restore a normal heart rhythm.).

Records showed regular checks were carried out on the AED, emergency medicines and the oxygen cylinder. These checks ensured the oxygen cylinder was full and in good working order, the AED battery was charged and the emergency medicines were in date.

Are services safe?

Staff recruitment

The practice had a policy and a set of procedures for the safe recruitment of staff which included seeking references, proof of identity, checking relevant qualifications and professional registration. We reviewed a sample of staff files and found the recruitment procedure had been followed. The practice manager told us they carried out Disclosure and Barring Service (DBS) checks for all newly employed staff. These checks identify whether a person has a criminal record or is on an official list of people barred from working in roles where they may have contact with children or adults who may be vulnerable. We reviewed records of staff recruitment and these showed all checks were in place.

All clinical staff at this practice were qualified and registered with the General Dental Council (GDC). There were copies of current registration certificates and personal indemnity insurance (insurance professionals are required to have in place to cover their working practice).

Monitoring health & safety and responding to risks

A health and safety policy and risk assessments were in place at the practice. This identified the risks to patients and staff who attended the practice. The risks had been identified and control measures put in place to reduce them. Annual health and safety risk assessments were carried out.

A fire risk assessment had been carried out. We saw evidence of bi-annual fire drills and monthly emergency lighting checks.

The practice maintained a file relating to the Control of Substances Hazardous to Health 2002 (COSHH) regulations, including substances such as disinfectants, and dental materials in use in the practice. The practice identified how they managed hazardous substances in its health and safety and infection control policies and in specific guidelines for staff, for example in its blood spillage and waste disposal procedures.

Infection control

There was an infection control policy and procedures to keep patients safe. These included hand hygiene, safe handling of instruments, managing waste products and decontamination guidance. The practice followed the guidance about decontamination and infection control issued by the Department of Health, namely 'Health Technical Memorandum 01-05 -Decontamination in

primary care dental practices (HTM 01-05)'. The practice manager was the infection control lead and was responsible for overseeing the infection control procedures within the practice. Staff had received training in infection prevention and control.

We saw evidence most staff were immunised against blood borne viruses (Hepatitis B) to ensure the safety of patients and staff. We noted the trainee dental nurses had not received a full course of vaccinations yet and there was no risk assessment for this. The practice manager advised us this would be looked into.

We observed the treatment rooms and the decontamination room to be clean and hygienic. Work surfaces were free from clutter. Staff told us they cleaned the treatment areas and surfaces between each patient and at the end of the morning and afternoon sessions to help maintain infection control standards. There was a cleaning schedule which identified and monitored areas to be cleaned. There were hand washing facilities in the treatment rooms and staff had access to supplies of personal protective equipment (PPE) for patients and staff members. Posters promoting good hand hygiene and the decontamination procedures were clearly displayed to support staff in following practice procedures. Sharps bins were appropriately located, signed and dated and not overfilled. We observed waste was separated into safe containers for disposal by a registered waste carrier and appropriate documentation retained.

Decontamination procedures were carried out in a dedicated decontamination room in accordance with HTM 01-05 guidance. An instrument transportation system had been implemented to ensure the safe movement of instruments between treatment rooms and the decontamination room which minimised the risk of the spread of infection.

We found instruments were being cleaned and sterilised in line with published guidance (HTM01-05). The dental nurses were well-informed about the decontamination process and demonstrated correct procedures.

The practice had systems in place for daily and weekly validation of the decontamination equipment and we saw records which confirmed these had taken place. There were sufficient instruments available to ensure the services provided to patients were uninterrupted.

Are services safe?

The practice had been carrying out an infection prevention self- assessment audit every six month. This is designed to assist all registered primary dental care services to meet satisfactory levels of decontamination of equipment. The most recent audit showed the practice was meeting the required standards.

Records showed a risk assessment process for Legionella had been carried out (Legionella is a term for particular bacterium which can contaminate water systems in buildings). The practice undertook processes to reduce the likelihood of legionella developing which included running the water lines in the treatment rooms at the beginning and end of each session and between patients, monitoring cold and hot water temperatures each month and the use of a water conditioning agent.

Equipment and medicines

The practice had maintenance contracts for essential equipment such as X-ray sets, the autoclaves and the compressor. The practice manager had a system in place to ensure equipment was serviced in line with manufacturer's guidance. We saw evidence of validation of the autoclaves and the compressor. Portable appliance testing (PAT) had been completed in May 2016 (PAT confirms that portable electrical appliances are routinely checked for safety).

We saw the practice was storing NHS prescription pads securely in accordance with current guidance and operated

a system for checking deliveries of blank NHS prescription pads. Prescriptions were stamped only at the point of issue. The practice also dispensed antibiotics for private patients. These were kept locked away and a log of which antibiotics had been dispensed was kept.

Radiography (X-rays)

The practice had a radiation protection file and a record of all X-ray equipment including service and maintenance history. Records we viewed demonstrated the X-ray equipment was regularly tested, serviced and repairs undertaken when necessary. A Radiation Protection Advisor (RPA) and a Radiation Protection Supervisor (RPS) had been appointed to ensure the equipment was operated safely and by qualified staff only. We found there were suitable arrangements in place to ensure the safety of the equipment. Local rules were available in all surgeries and within the radiation protection folder for staff to reference if needed. We saw a justification, grade and a report was documented in the dental care records for all X-rays which had been taken.

X-ray audits were carried out every six months. This included assessing the quality of the X-rays which had been taken. The results of the most recent audit undertaken confirmed they were compliant with the Ionising Radiation (Medical Exposure) Regulations 2000 (IR(ME)R).

Are services effective?

(for example, treatment is effective)

Our findings

Monitoring and improving outcomes for patients

The practice kept up to date detailed electronic and paper dental care records. They contained information about the patient's current dental needs and past treatment. The dentists carried out an assessment in line with recognised guidance from the Faculty of General Dental Practice (FGDP). This was repeated at each examination in order to monitor any changes in the patient's oral health. The dentists used NICE guidance to determine a suitable recall interval for the patients. This takes into account the likelihood of the patient experiencing dental disease.

During the course of our inspection we discussed patient care with the dentists and checked dental care records to confirm the findings. Clinical records were comprehensive and included details of the condition of the teeth, soft tissue lining the mouth, gums and any signs of mouth cancer. Records showed patients were made aware of the condition of their oral health and whether it had changed since the last appointment. If the patient had more advanced gum disease then a more detailed inspection of the gums was undertaken.

Medical history checks were updated every time they attended for treatment and entered in to their electronic dental care record. This included an update on their health conditions, current medicines being taken and whether they had any allergies. The dentists used markers on patients noted to alert them if there were any medical conditions which could affect treatment, for example, if they were on blood thinning medicines.

The practice used current guidelines and research in order to continually develop and improve their system of clinical risk management. For example, following clinical assessment, the dentist followed the guidance from the FGDP before taking X-rays to ensure they were required.

Health promotion & prevention

The practice had a strong focus on preventative care and supporting patients to ensure better oral health in line with the 'Delivering Better Oral Health' toolkit (DBOH). DBOH is an evidence based toolkit used by dental teams for the prevention of dental disease in a primary and secondary care setting. For example, the dentist applied fluoride

varnish to children who attended for an examination. Fissure sealants were also applied to children at high risk of dental decay. High fluoride toothpastes were recommended for patients at high risk of dental decay.

The practice had a selection of dental products on sale in the reception area to assist patients with their oral health.

The medical history form patients completed included questions about smoking and alcohol consumption. We were told by the dentist and saw in dental care records that smoking cessation advice was given to patients where appropriate. Patients were made aware of the ill effects of smoking on their gum health. There were health promotion leaflets available in the waiting rooms to support patients.

Staffing

New staff to the practice had a period of induction to familiarise themselves with the way the practice ran. The induction process included the location of the emergency kit, security arrangements and an introduction to the policies. We saw evidence of completed induction checklists in the personnel files.

Staff told us they had good access to on-going training to support their skill level and they were encouraged to maintain the continuous professional development (CPD) required for registration with the General Dental Council (GDC). The practice organised in house training for medical emergencies to help staff keep up to date with current guidance on treatment of medical emergencies in the dental environment. Records showed professional registration with the GDC was up to date for all staff and we saw evidence of on-going CPD.

The practice had a dental hygiene therapist. Dental hygiene therapists are trained dental care professionals who are qualified to undertake certain treatments, for example, fillings, periodontal treatments and the extraction of deciduous teeth. The dentist could refer patients for such treatments to the dental hygiene therapist.

Working with other services

The practice worked with other professionals in the care of their patients where this was in the best interest of the patient and in line with current guidance. For example, referrals were made to hospitals and specialist dental services for further investigations or specialist treatment including orthodontics, oral surgery and sedation.

Are services effective?

(for example, treatment is effective)

The practice had a procedure for the referral of a suspected malignancy. This involved sending an urgent fax the same day and a telephone call to confirm the fax had arrived.

The practice did not have a process in place to actively monitor referrals. The practice manager told us a process would be put in place to monitor referrals.

Consent to care and treatment

Patients were given information to support them to make decisions about the treatment they received. Staff were knowledgeable about how to ensure patients had sufficient information and the mental capacity to give informed consent. The dentists described to us how valid consent was obtained for all care and treatment and the role family members and carers might have in supporting the patient

to understand and make decisions. The dentists were familiar of the concept of Gillick competency clear about involving children in decision making and ensuring their wishes were respected regarding treatment.

Staff had an understanding of the principles of the Mental Capacity Act (MCA) 2005 and how it was relevant to ensuring patients had the capacity to consent to their dental treatment.

Staff ensured patients gave their consent before treatment began. We were told that individual treatment options, risks, benefits and costs were discussed with each patient. Patients were given a written treatment plan which outlined the treatments which had been proposed and the associated costs. Patients were given time to consider and make informed decisions about which option they preferred.

Are services caring?

Our findings

Respect, dignity, compassion & empathy

Feedback from patients was positive and they commented they were treated with care, respect and dignity. Staff told us they always interacted with patients in a respectful, appropriate and kind manner. We observed staff to be friendly and respectful towards patients during interactions at the reception desk and over the telephone.

We observed privacy and confidentiality were maintained for patients who used the service on the day of inspection. This included ensuring dental care records were not visible to patients and keeping surgery doors shut during consultations and treatment.

We observed staff to be helpful, discreet and respectful to patients. Staff told us if a patient wished to speak in private an empty room would be found to speak with them.

Involvement in decisions about care and treatment

The practice provided patients with information to enable them to make informed choices. Patients commented they felt involved in their treatment and it was fully explained to them. Staff described to us how they involved patients' relatives or carers when required and ensured there was sufficient time to explain fully the care and treatment they were providing in a way patients understood.

Patients were also informed of the range of treatments available in the practice information leaflet and on displayed notices and leaflets in the waiting rooms. NHS and private price lists were displayed in the waiting rooms.

Are services responsive to people's needs?

(for example, to feedback?)

Our findings

Responding to and meeting patients' needs

We found the practice had an efficient appointment system in place to respond to patients' needs. Staff told us patients who requested an urgent appointment would be seen the same day. We saw evidence in the appointment book there were dedicated emergency slots available each day for each dentist. If the emergency slots had already been taken for the day then the patient was offered to sit and wait for an appointment if they wished.

Patients commented they had sufficient time during their appointment and they were not rushed. We observed the clinics ran smoothly on the day of the inspection and patients were not kept waiting.

Tackling inequity and promoting equality

The practice had equality and diversity, and disability policies to support staff in understanding and meeting the needs of patients. A DDA audit had been completed as required by the Equality Act 2010. Reasonable adjustments had been made to the premises to accommodate patients with mobility difficulties. These included a step free access to the premises and an accessible toilet. The ground floor surgeries were large enough to accommodate a wheelchair or a pram. The practice also had a hearing loop and access to translators for patients whose first language was not English.

Access to the service

The practice displayed its opening hours in the practice information leaflet and on the practice website.

Patients could access care and treatment in a timely way and the appointment system met their needs. The practice had a system in place for patients requiring urgent dental care when the practice was closed. Patients were signposted to the NHS 111 service. Information about the out of hour's emergency dental service was available on the telephone answering service, displayed in the waiting area, on the practice website and in the practice information leaflet.

Concerns & complaints

The practice had a complaints policy which provided staff with clear guidance about how to handle a complaint. There were details of how patients could make a complaint displayed in the waiting rooms. The practice manager was responsible for dealing with complaints when they arose. Staff told us they raised any formal or informal comments or concerns with the practice manager to ensure responses were made in a timely manner. Staff told us they aimed to resolve complaints in-house initially. We reviewed the complaints which had been received in the past 12 months and found they had been dealt with in line with the practice's policy. We were told as a result of a complaint the letter sent out to patients who had not attended an appointment had been re-worded.

The practice manager kept a log of any complaints which had been raised. This included the nature of the complaint, the date it had been acknowledged, the date a response had been provided and a conclusion including any actions taken as a result. Any complaints would be discussed at staff meetings in order to disseminate learning and prevent recurrence.

Are services well-led?

Our findings

Governance arrangements

The practice was a member of a 'Good Practice' accreditation scheme. This is a quality assurance scheme that demonstrates a visible commitment to providing quality dental care to nationally recognised standards.

The practice manager was responsible for the day to day running of the service and the principal dental was the clinical lead. There was a range of policies and procedures in use at the practice. We saw they had systems in place to monitor the quality of the service and to make improvements. The practice had governance arrangements in place to ensure risks were identified, understood and managed appropriately.

The practice had an effective approach for identifying where quality or safety was being affected and addressing any issues. Health and safety and risk management policies were in place and we saw a risk management process to ensure the safety of patients and staff members.

There was an effective management structure in place to ensure responsibilities of staff were clear. Staff told us they felt supported and were clear about their roles and responsibilities.

Leadership, openness and transparency

The culture of the practice encouraged candour, openness and honesty to promote the delivery of high quality care and to challenge poor practice. Staff told us there was an open culture within the practice and they were encouraged and confident to raise any issues at any time. These would be discussed openly at staff meetings where relevant and it was evident the practice worked as a team and dealt with any issue in a professional manner.

The practice held monthly staff meetings. These meetings were minuted for those who were unable to attend.

Learning and improvement

Quality assurance processes were used at the practice to encourage continuous improvement. The practice audited areas of their practice as part of a system of continuous improvement and learning. This included audits such as dental care records, X-rays, infection prevention and control and waiting times. We looked at the audits and saw the practice was performing well.

Staff told us they had access to training and this was monitored to ensure essential training was completed each year; this included medical emergencies and basic life support. Staff working at the practice were supported to maintain their continuous professional development as required by the GDC.

Staff told us they had annual appraisals and training requirements were discussed at these. We saw evidence of completed appraisal documents. Staff also felt they could approach the principal dentist or practice manager at any time to discuss continuing training and development as the need arose.

Practice seeks and acts on feedback from its patients, the public and staff

The practice had systems in place to involve, seek and act upon feedback from people using the service including carrying out patient satisfaction surveys and a comment box. We were told as a result of feedback from patients a coat hook had been put up on the toilet door and an extra handrail had been installed on the stairs.

The practice also undertook the NHS Friends and Family Test (FFT). The FFT is a feedback tool which supports the fundamental principle that people who use NHS services should have the opportunity to provide feedback on their experience.
