

Dr. David Tildsley

Weston Dental Centre

Inspection Report

1 Cresta Drive
Weston Village
Runcorn
WA7 1RS

Tel: 01928 567819

Website: www.westondental.co.uk

Date of inspection visit: 20/09/2017

Date of publication: 09/10/2017

Overall summary

We carried out this announced inspection on 20 September 2017 under Section 60 of the Health and Social Care Act 2008 as part of our regulatory functions. We planned the inspection to check whether the registered provider was meeting the legal requirements in the Health and Social Care Act 2008 and associated regulations. The inspection was led by a CQC inspector who was supported by a specialist dental adviser.

We told the NHS England Cheshire and Merseyside area team and Healthwatch that we were inspecting the practice. We did not receive any information of concern from them.

To get to the heart of patients' experiences of care and treatment we always ask the following five questions:

- Is it safe?
- Is it effective?
- Is it caring?
- Is it responsive to people's needs?
- Is it well-led?

These questions form the framework for the areas we look at during the inspection.

Our findings were:

Are services safe?

We found that this practice was providing safe care in accordance with the relevant regulations.

Are services effective?

We found that this practice was providing effective care in accordance with the relevant regulations.

Are services caring?

We found that this practice was providing caring services in accordance with the relevant regulations.

Are services responsive?

We found that this practice was providing responsive care in accordance with the relevant regulations.

Are services well-led?

We found that this practice was providing well-led care in accordance with the relevant regulations.

Background

Weston Dental Centre is located in the village of Weston and provides dental care and treatment to adults and children on an NHS and privately funded basis.

The provider has installed a ramp to facilitate access to the practice for wheelchair users. The practice has three treatment rooms. Car parking is available at the practice.

Summary of findings

The dental team includes two dentists, two dental hygiene therapists, five dental nurses, two of whom are apprentices, and two receptionists. The team is supported by a practice manager.

The practice is owned by an individual who is the principal dentist there. They have legal responsibility for meeting the requirements in the Health and Social Care Act 2008 and associated regulations about how the practice is run.

We received feedback from 42 people during the inspection about the services provided. The feedback provided was positive about the practice.

During the inspection we spoke to one of the dentists, a dental hygiene therapist, dental nurses, receptionists and the practice manager. We looked at practice policies, procedures and other records about how the service is managed.

The practice is open:

Monday to Friday 9.00am to 4.30pm.

Our key findings were:

- The practice was clean and well maintained.
- The practice had infection control procedures in place which reflected published guidance.
- Staff knew how to deal with emergencies. Appropriate medical emergency medicines and equipment were available.
- The practice had safeguarding processes in place and staff knew their responsibilities for safeguarding adults and children.

- Staff provided patients' care and treatment in line with current guidelines.
- The practice had a procedure in place for dealing with complaints.
- Staff treated patients with dignity and respect and took care to protect their privacy and personal information.
- The appointment system took patients' needs into account. Dedicated emergency appointments were available.
- The practice had a leadership structure. Staff felt involved and supported and worked well as a team.
- The practice asked patients and staff for feedback about the services they provided.
- The practice had systems in place to help them manage risk. We found that not all measures to reduce the risks associated with sharp items were in place.
- The practice had staff recruitment procedures in place but we found that procedures were not followed for visiting staff.

There were areas where the provider could make improvements and should:

- Review the practice's recruitment policy and procedures to ensure accurate, complete and detailed records are maintained for all staff.
- Review the practice's sharps procedures to ensure compliance with the Health and Safety (Sharp Instruments in Healthcare) Regulations 2013.

Summary of findings

The five questions we ask about services and what we found

We always ask the following five questions of services.

Are services safe?

We found that this practice was providing safe care in accordance with the relevant regulations.

The practice had systems and processes in place to provide safe care and treatment. They used learning from incidents to help them improve.

Staff received training in safeguarding and knew how to recognise the signs of abuse and how to report concerns.

The premises and equipment were clean and properly maintained. The practice followed national guidance for cleaning, sterilising and storing dental instruments.

The practice had suitable arrangements for dealing with medical and other emergencies.

We saw that the practice had put in place numerous measures to reduce the risks identified in their risk assessments, but not all reasonably practicable measures had been put in place to reduce the risks associated with sharp items.

Staff were trained for their roles and the practice completed essential recruitment checks before employing staff. We observed that checks had not been carried out for visiting clinicians. The provider carried out these checks immediately.

No
action

Are services effective?

We found that this practice was providing effective care in accordance with the relevant regulations.

The dentists assessed patients' needs and provided care and treatment in line with recognised guidance. Patients described the treatment they received as excellent. The dentists discussed treatment with patients so they could give informed consent and recorded this in their records.

The practice had clear arrangements when patients needed to be referred to other dental or health care professionals.

The practice supported staff to complete training relevant to their roles and had systems in place to monitor this.

No
action

Are services caring?

We found that this practice was providing caring services in accordance with the relevant regulations.

Patients were positive about all aspects of the service. They told us staff were caring, attentive and professional. They said that they were given helpful information and advice about dental treatment, and said their dentist listened to them.

Patients commented that staff made them feel at ease, especially when they were anxious about visiting the dentist.

We saw that staff protected patients' privacy and were aware of the importance of confidentiality.

Patients said staff treated them with dignity and respect.

No
action

Summary of findings

Are services responsive to people's needs?

We found that this practice was providing responsive care in accordance with the relevant regulations.

The practice's appointment system took account of patients' needs. Patients could obtain an appointment quickly in an emergency.

The practice had access to interpreter services.

Staff considered patients' individual needs and made reasonable adjustments to meet these. This included providing facilities for patients with disabilities

Staff responded to concerns and complaints quickly.

No
action

Are services well-led?

We found that this practice was providing well-led care in accordance with the relevant regulations.

The practice had robust arrangements in place to ensure the smooth running of the service. These included systems for the practice team to review the quality and safety of the care and treatment provided.

There was a clearly defined management structure. Managers were committed to maintaining high standards in all aspects of the service. Staff felt supported and appreciated.

Staff were aware of the importance of confidentiality and protecting patients' personal information. The practice team kept accurate patient dental care records which were stored securely.

The practice monitored clinical and non-clinical areas of their work to help them improve and learn. This included asking for and listening to the views of patients and staff.

No
action

Are services safe?

Our findings

Reporting, learning and improvement from incidents

The practice had policies and procedures to report, investigate, respond to and learn from accidents, incidents and significant events. Staff knew about these and understood their role in the process.

The practice recorded, responded to and discussed all incidents to reduce risk and support future learning.

The practice received national medicines and equipment safety alerts, for example, from the Medicines and Healthcare products Regulatory Agency. Relevant alerts were discussed with staff, acted on and stored for future reference.

Reliable safety systems and processes (including safeguarding)

The practice had safeguarding policies and procedures in place to provide staff with information about identifying, reporting and dealing with suspected abuse. Staff knew their responsibilities should they have concerns about the safety of children, young people or adults who are at risk due to their circumstances. Staff received safeguarding training and knew the signs and symptoms of abuse and neglect and how to report concerns.

The practice had a whistleblowing policy in place. Staff told us they were confident to raise concerns without fear of recrimination.

The practice had a business continuity plan describing how the practice would deal with events which could disrupt the normal running of the practice.

Medical emergencies

Staff knew what to do in a medical emergency and completed training in medical emergencies and life support every year.

Emergency equipment and medicines were available as recommended in recognised guidance. Staff carried out, and kept records of, checks to make sure the medicines and equipment were within their expiry dates and in working order.

Staff recruitment

The practice had staff recruitment procedures in place to help them employ suitable staff. These reflected the relevant legislation. We looked at several staff recruitment records. These showed the practice followed their recruitment procedure. We observed that not all the prescribed information was available for a visiting dentist and a visiting dental nurse. The provider obtained this information during the inspection.

Clinical staff were qualified and registered with the General Dental Council, where necessary.

Monitoring health and safety and responding to risks

The practice had an overarching health and safety policy in place, underpinned by several specific policies and risk assessments to help manage potential risk. These covered general workplace and specific dental practice risks. These included risk assessments which staff reviewed every year.

We saw that the practice had put in place measures to reduce the risks identified in most of the risk assessments. The provider had not considered all reasonably practicable measures to mitigate the risks associated with the use and disposal of used sharps, for example, the sharps risk assessment did not identify the user's responsibility for dismantling and disposing of used sharps.

The provider had a system in place to ensure clinical staff had received appropriate vaccinations, including the vaccination to protect them against the Hepatitis B virus, and that the effectiveness of the vaccination was identified. People who are likely to come into contact with blood products, and are at increased risk of injuries from sharp instruments, should receive the Hepatitis B vaccination to minimise the risks of acquiring blood borne infections.

Dental nurses worked with all the clinicians when they treated patients. Clinical staff had professional indemnity cover.

Infection control

The practice had an infection prevention and control policy and associated procedures in place to keep patients safe. They followed guidance in The Health Technical Memorandum 01-05: Decontamination in primary care dental practices, (HTM01-05), published by the Department of Health. Staff completed infection prevention and control training regularly.

Are services safe?

The practice had suitable arrangements for transporting, cleaning, checking, sterilising and storing instruments in accordance with HTM 01-05. The records showed equipment staff used for cleaning and sterilising instruments was maintained and used in line with the manufacturers' guidance.

Staff carried out infection prevention and control audits twice a year and we saw evidence of action taken where the practice fell short of full compliance.

The practice had procedures in place, in accordance with current guidance, to reduce the possibility of Legionella or other bacteria developing in the water systems.

We saw cleaning schedules for the premises. The practice was clean when we inspected and patients confirmed this was usual.

Equipment and medicines

We saw servicing documentation for the equipment used in the practice. Staff carried out checks in accordance with the manufacturers' recommendations.

The practice had suitable systems for prescribing, dispensing and storing medicines.

The practice stored and kept records of NHS prescriptions in accordance with current guidance.

Radiography (X-rays)

The practice had arrangements in place to ensure X-ray procedures were carried out safely. We saw recent routine test certificates for all three X-ray machines but no critical examination certificates. The practice manager assured us critical examinations had been carried out and they were awaiting the reports from the service engineer. Following the inspection the provider submitted the critical examination reports for the X-ray machines.

We saw evidence that the dentists justified, graded and reported on the X-rays they took. The practice carried out X-ray audits every year following current guidance.

Where appropriate, staff completed continuing professional development in respect of dental radiography.

Are services effective?

(for example, treatment is effective)

Our findings

Monitoring and improving outcomes for patients

The practice kept detailed dental care records containing information about patients' current dental needs, past treatment and medical history. The dentists assessed patients' treatment needs in line with recognised guidance.

We saw that staff audited patients' dental care records to check that the dentists recorded the necessary information.

Health promotion and prevention

The practice supported patients to achieve better oral health in accordance with the Department of Health publication 'Delivering better oral health: an evidence-based toolkit for prevention'. The dentists told us they prescribed high concentration fluoride products if a patient's risk of tooth decay indicated this would help them. The clinicians told us they discussed smoking, alcohol consumption and diet with patients during appointments. The practice had a selection of dental products for sale and provided health promotion leaflets to help patients with their oral health.

Staffing

Staff new to the practice completed a period of induction based on a structured induction programme.

The General Dental Council requires dental professionals to complete continuing professional development as a requirement of their registration. Staff told us the practice provided support, training opportunities and encouragement to assist them in meeting the requirements of their registration and with their professional development. The practice manager monitored training to ensure essential training was completed.

Staff told us they had annual appraisals. These were used to discuss learning needs, general wellbeing and future professional development. We saw several completed appraisals which confirmed this.

Working with other services

The dentist confirmed they referred patients to a range of specialists in primary and secondary care if they needed treatment the practice did not provide. This included referring patients with suspected oral cancer in accordance with the current guidelines. The practice monitored urgent referrals to ensure they were dealt with promptly.

Consent to care and treatment

The practice team understood the importance of obtaining and recording patients' consent to treatment. The dentists told us they gave patients information about treatment options and the risks and benefits of these so they could make informed decisions. Patients confirmed their dentist listened to them and gave them clear information about their treatment.

The practice's consent policy included information about the Mental Capacity Act 2005. Staff had a limited understanding of their responsibilities under the act when treating adults who may not be able to make informed decisions. The practice had training on the Mental Capacity Act scheduled in their training plan for the following month. The policy also referred to Gillick competence. The clinicians were aware of the need to consider this when treating young people under 16. Staff described how they involved patients' relatives or carers when appropriate and made sure they had enough time to explain treatment options clearly.

Are services caring?

Our findings

Respect, dignity, compassion and empathy

Staff were aware of their responsibility to respect people's diversity and human rights.

Patients commented positively that staff were friendly, kind and patient. We saw that staff treated patients kindly and with respect and were friendly towards patients at the reception desk and over the telephone.

Staff understood the importance of providing emotional support for patients who were nervous of dental treatment. Patients told us staff were kind and helpful when they were in pain, distress or discomfort.

Staff were aware of the importance of privacy and confidentiality. The layout of reception and waiting areas provided privacy when reception staff were dealing with patients. Staff described how they avoided discussing

confidential information in front of other patients. Staff told us that if a patient requested further privacy facilities were available. The reception computer screens were not visible to patients and staff did not leave patient information where people might see it.

Involvement in decisions about care and treatment

The dentists provided patients with information to help them make informed choices. Patients confirmed that staff listened to them, discussed options for treatment with them, and gave them time to think. The dentist described to us the conversations they had with patients to help them understand their treatment options.

The practice's website provided patients with information about the range of treatments available at the practice.

Information about the range of treatments provided was available on the practice's website and in leaflet format in the waiting room.

Are services responsive to people's needs?

(for example, to feedback?)

Our findings

Responding to and meeting patients' needs

Patients described high levels of satisfaction with the responsive service provided by the practice.

The practice was well maintained. The practice aimed to provide a comfortable, relaxing environment.

The practice had an appointment system in place which took account of patients' needs. Staff told us that patients requiring urgent appointments were seen the same day.

We saw that the dentists tailored appointment lengths to patients' individual needs and patients could choose from morning and afternoon appointments. Patients told us they had enough time during their appointment and did not feel rushed.

Staff told us that they currently have patients for whom they need to make adjustments to enable them to receive treatment. Staff described examples of specific arrangements for some of their nervous patients who found it unsettling to wait in the waiting room before appointments and assistance given to patients living with dementia.

The practice had an audio-visual screen in the waiting room which displayed information on, dental charges and treatments and car parking arrangements.

Tackling inequity and promoting equality

The practice had taken into consideration the needs of different groups of people, for example, people with disabilities, and put in place reasonable adjustments, for example, handrails to assist with mobility.

The entire practice was located at ground floor level and was accessible to wheelchair users.

Staff had access to interpreter and translation services for people who required them. The practice had a hearing induction loop available.

Access to the service

The practice displayed its opening hours on the premises, in the practice's information leaflet and on their website.

Staff made every effort to keep waiting times and cancellations to a minimum.

The practice made every effort to see patients experiencing pain or other dental emergencies on the same day and had appointments available for this. The practice's website, information leaflet and answerphone provided contact details for patients requiring emergency dental treatment during the working day and when the practice was not open. Patients confirmed they could make routine and emergency appointments easily and were rarely kept waiting for their appointment.

Concerns and complaints

The practice had a complaints policy providing guidance to staff on how to handle a complaint. The practice information leaflet explained how to make a complaint. The practice manager was responsible for dealing with complaints and aimed to resolve these in-house where possible. Staff told us they raised any formal or informal comments or concerns with the practice manager to ensure the patient received a quick response.

Information was available about organisations patients could contact should they not wish to complain to the practice directly or if they were not satisfied with the way the practice dealt with their concerns.

We looked at comments, compliments and complaints the practice received in the previous 12 months. We saw that the practice responded to concerns appropriately and discussed outcomes with staff to share learning and improve the service.

Are services well-led?

Our findings

Governance arrangements

The practice had robust systems in place to support the management of the service. These included policies, procedures and risk assessments to support good governance and to guide staff. We saw that policies, procedures and risk assessments were regularly reviewed to ensure they were up to date with regulations and guidance.

The principal dentist had overall responsibility for the management and clinical leadership of the practice. The practice manager was responsible for the day to day running of the service. We saw staff had access to suitable supervision and support for their roles and responsibilities.

The practice was a member of a practice accreditation scheme which promoted good standards in dental care.

We saw the practice had arrangements in place to monitor the quality of the service and make improvements where required.

The practice had information security arrangements in place and staff were aware of the importance of these in protecting patients' personal information.

Leadership, openness and transparency

Staff were aware of the duty of candour requirements to be open, honest and to offer an apology to patients should anything go wrong.

Staff told us there was an open, transparent culture in the practice. They said they were encouraged to raise issues and they felt confident to do this. They told us the managers were approachable, would listen to their concerns and act appropriately.

The practice held regular meetings where staff could communicate information, exchange ideas and discuss updates. Where appropriate meetings were arranged to share urgent information.

Learning and improvement

The practice had quality assurance processes in place to encourage learning and continuous improvement. These included, for example, audits. We reviewed audits of dental care records, X-rays and infection prevention and control. Staff kept records of the results of these and produced action plans where necessary. We saw the auditing process resulted in improvements.

The practice was committed to learning and improving and valued staff contributions. We saw clear evidence of learning from complaints, incidents, audits and feedback.

Staff had annual appraisals, which helped identify individual learning needs. Staff told us the practice provided support and training opportunities for their on-going learning.

Practice seeks and acts on feedback from its patients, the public and staff

The practice had a system in place to seek the views of patients about all areas of service delivery through the use of regular patient surveys and the NHS Friends and Family Test.

We saw that the provider acted on patient feedback, for example, patients had been consulted in relation to opening hours.

The practice gathered feedback from staff through meetings, appraisals and informal discussions. Staff were encouraged to offer suggestions for improvements to the service and said these were listened to and acted on.
