Inspection Report

2 High Street
Eckington
Sheffield
South Yorkshire
S21 4DN

Tel: 01246 432994

Website: www.oasisdentalcare.co.uk

Date of inspection visit: 16 November 2017

Date of publication: 14/12/2017

Overall summary

We carried out this announced inspection on 16 November 2017 under Section 60 of the Health and Social Care Act 2008 as part of our regulatory functions. We planned the inspection to check whether the registered provider was meeting the legal requirements in the Health and Social Care Act 2008 and associated regulations. The inspection was led by a CQC inspector who was supported by a specialist dental adviser.

We told the NHS England area team and Healthwatch that we were inspecting the practice. They did not have any relevant information to share with us regarding this dental practice.

To get to the heart of patients' experiences of care and treatment, we always ask the following five questions:

- Is it safe?
- Is it effective?
- Is it caring?
- Is it responsive to people's needs?
- Is it well-led?

These questions form the framework for the areas we look at during the inspection.

Our findings were:

Are services safe?

We found that this practice was providing safe care in accordance with the relevant regulations.

Are services effective?

We found that this practice was providing effective care in accordance with the relevant regulations.

Are services caring?

We found that this practice was providing caring services in accordance with the relevant regulations.

Are services responsive?

We found that this practice was providing responsive care in accordance with the relevant regulations.

Are services well-led?

We found that this practice was providing well-led care in accordance with the relevant regulations.

Background

This Oasis dental practice is located in the village of Eckington in north Derbyshire. The practice provides both NHS (50%) and private (50%) dental treatment to patients of all ages.

The practice is located on two floors with four treatment rooms, two of which are located on the ground floor.

Summary of findings

There is level access into the practice and the ground floor treatment rooms. There is roadside parking in the area behind the practice, plus designated parking for blue badge holders.

The dental team includes: three dentists; one implantologist; three dental therapists; five qualified dental nurses; two trainee dental nurses; four receptionists and a practice manager.

The practice is owned by an organisation and as a condition of registration must have a person registered with the Care Quality Commission as the registered manager. Registered managers have legal responsibility for meeting the requirements in the Health and Social Care Act 2008 and associated regulations about how the practice is run. The registered manager at the practice was the practice manager.

On the day of inspection we collected 12 completed CQC comment cards. We also spoke with two patients in the practice. This information gave us a positive view of the practice.

During the inspection we spoke with one dentist, one hygiene therapist, four dental nurses, one receptionist and the practice manager. We looked at practice policies and procedures and other records about how the service is managed.

The practice opening hours are: Monday to Friday: 9 am to 5:30 pm.

Our key findings were:

- The practice was clean and well maintained.
- The practice had infection control procedures which followed published guidance.
- The practice asked staff and patients for feedback about the services they provided, and received positive feedback.
- Staff knew how to deal with emergencies. Appropriate medicines and life-saving equipment were available.
- The practice had systems to help them manage risks in the practice, particularly with regard to health and safety.
- The practice had suitable safeguarding processes. Staff had been trained and knew their responsibilities for safeguarding adults and children.
- The practice had thorough staff recruitment procedures.
- The clinical staff provided patients' care and treatment in line with current guidelines.
- Staff treated patients with dignity and respect and took measures to protect their privacy and personal information.
- The practice completed regular audits and used the information to make improvements.
- The appointment system met patients' needs.
- The practice had effective leadership. Staff felt involved and supported and worked well as a team.
- The practice dealt with complaints positively and efficiently.

Summary of findings

The five questions we ask about services and what we found

We always ask the following five questions of services.

Are services safe?

We found that this practice was providing safe care in accordance with the relevant regulations.

The practice had systems and processes to provide safe care and treatment. They used learning from incidents and complaints to help them improve.

Staff received training in safeguarding and knew how to recognise the signs of abuse and how to report concerns. There was a lead person appointed within the practice for safeguarding matters.

Staff were suitably qualified and the practice completed essential recruitment checks.

The premises and equipment were clean and properly maintained. The practice followed national guidance for cleaning, sterilising and storing dental instruments.

The practice had suitable arrangements and equipment for dealing with medical and other emergencies.

No
action

Are services effective?

We found that this practice was providing effective care in accordance with the relevant regulations.

The dentists assessed patients' needs and provided care and treatment in line with recognised guidance. Patients described the treatment they received as professional, helpful and competent. The dentists discussed treatment with patients so they could give informed consent and recorded this in their records.

The practice had clear arrangements when patients needed to be referred to other dental or health care professionals.

The practice supported staff to complete training relevant to their roles and had systems to help them monitor this.

No
action

Are services caring?

We found that this practice was providing caring services in accordance with the relevant regulations.

We received feedback about the practice from 14 people. Patients were positive about all aspects of the service the practice provided. They told us staff were professional, helpful and friendly. Patients also said their dentist listened to them. Patients commented that they made them feel at ease, especially when they were anxious about visiting the dentist.

We saw that staff protected patients' privacy and were aware of the importance of confidentiality. Patients said staff treated them with dignity and respect.

No
action

Are services responsive to people's needs?

We found that this practice was providing responsive care in accordance with the relevant regulations.

The practice's appointment system was efficient and met patients' needs. Patients could get an appointment quickly if in pain.

Staff considered patients' different needs. This included providing ground floor treatment rooms for disabled patients and families with children. The practice also had access to telephone interpreter services.

No
action

Summary of findings

The practice took patients views seriously. They valued compliments from patients and responded to concerns and complaints quickly and constructively.

The practice had an induction hearing loop to assist patients who used a hearing aid.

Are services well-led?

We found that this practice was providing well-led care in accordance with the relevant regulations.

The practice had arrangements to ensure the smooth running of the service. These included systems for the practice team to discuss the quality and safety of the care and treatment provided. There was a clearly defined management structure and staff felt supported and appreciated.

The practice team kept complete patient dental care records which were, clearly written and stored securely.

The practice monitored clinical and non-clinical areas of their work to help them improve and learn. This included asking for and listening to the views of patients and staff.

**No
action**

Are services safe?

Our findings

Reporting, learning and improvement from incidents

The practice had policies and procedures to report, investigate, respond and learn from accidents, incidents and significant events. Staff knew about these and understood their role in the process. The practice had an accident reporting policy and procedure. Documentation within the practice showed the accidents were managed in line with the policy.

The practice recorded, responded to and discussed all significant events to reduce risk and support future learning. The practice investigated every significant event and recorded the outcome. There was clear analysis and action and learning points were recorded.

The practice received national patient safety and medicines alerts from the Medicines and Healthcare Products Regulatory Authority (MHRA). Relevant alerts were discussed with staff, acted on and stored for future reference. Records showed the practice received regular alerts. Staff at the practice were aware of recent alerts affecting dental practice.

Reliable safety systems and processes (including safeguarding)

Staff knew their responsibilities if they had concerns about the safety of children, young people and adults who were vulnerable due to their circumstances. The practice had safeguarding policies and procedures to provide staff with information about identifying, reporting and dealing with suspected abuse. Staff had received appropriate training for their role. The practice manager was the identified lead for safeguarding in the practice. They had completed safeguarding training during July 2017.

Staff knew about the signs and symptoms of abuse and neglect and how to report concerns. The practice had a whistleblowing policy. Staff told us they felt confident they could raise concerns without fear of recrimination.

The practice protected staff and patients with guidance available for staff on the Control Of Substances Hazardous to Health (COSHH) Regulations 2002. All COSHH information including a risk assessment and copies of manufacturers' product data sheets were stored in a designated COSHH file.

We looked at the practice's arrangements for safe dental care and treatment. These included risk assessments which staff reviewed every year. The practice followed relevant safety laws when using needles and other sharp dental items. This included single use disposable matrix bands being available and a system for safe handling of needles. In addition it was practice policy that only dentists handled needles. The dentists used rubber dam in line with guidance from the British Endodontic Society when providing root canal treatment.

The practice had a business continuity plan describing how the practice would deal events which could disrupt the normal running of the practice. A copy was also available off site. The plan had last been updated in May 2017 to reflect changes at the practice.

Medical emergencies

Staff knew what to do in a medical emergency and completed training in emergency resuscitation and basic life support every year, with the last training completed in November 2017. Staff had also discussed different emergency scenarios and this had been recorded.

Emergency equipment and medicines were available as described in recognised guidance. Staff kept records of their checks to make sure these were available, within their expiry date, and in working order. Equipment included an automated external defibrillator (AED), medical oxygen and portable suction.

The practice had a first aid box which was located centrally. Two members of staff had completed first aid at work training.

Staff recruitment

The practice had a staff recruitment policy and procedure to help them employ suitable staff. This reflected the relevant legislation. We looked at eight staff recruitment files. These showed the practice followed their recruitment procedure.

We saw that every member of staff had received a Disclosure and Barring Service (DBS) check.

Clinical staff were qualified and registered with the General Dental Council (GDC) and had professional indemnity cover. The practice manager had a system to monitor that relevant staff were up to date with their registration and indemnity insurance cover.

Are services safe?

Monitoring health & safety and responding to risks

The practice's health and safety policies and risk assessments were up to date and reviewed annually to help manage potential risk. These covered general workplace and specific dental topics. The practice manager was the lead person with overall responsibility for health and safety at the practice. The practice had current employer's liability insurance which was due for renewal on 31 October 2018.

We saw that regular health and safety audits were completed, reviewed and where necessary updated.

The practice had an automatic fire alarm system which was serviced regularly; this included automatic fire detection and emergency lighting. The practice had appointed fire marshals and designated staff had completed fire training within the practice. The fire risk assessment had been reviewed in June 2017.

A dental nurse worked with the dentists and dental hygienists when they treated patients.

Infection control

The practice had an infection prevention and control policy and procedures to keep patients safe. They followed guidance in The Health Technical Memorandum 01-05: Decontamination in primary care dental practices (HTM01-05) published by the Department of Health. Staff completed an annual update in infection prevention and control. The most recent training having been completed in November 2017.

The practice had suitable arrangements for transporting, cleaning, checking, sterilising and storing instruments in line with HTM01-05. The records showed equipment staff used for cleaning and sterilising instruments was maintained and used in line with the manufacturers' guidance.

The practice policy identified infection prevention and control audits should be completed twice a year. The latest audit was completed in July 2017.

The practice had procedures to reduce the possibility of Legionella or other bacteria developing in the water systems, in line with a risk assessment which had been updated in May 2016.

There were records to demonstrate that clinical staff had received inoculations against Hepatitis B and had received boosters when required.

We saw cleaning schedules for the premises. The practice was clean when we inspected and patients confirmed this was usual.

Equipment and medicines

We saw servicing documentation for the equipment used. Staff carried out checks in line with the manufacturers' recommendations. There were records within the practice to demonstrate that equipment had been serviced regularly.

The practice had suitable systems for prescribing, dispensing and storing medicines.

The practice stored and kept records of NHS prescriptions as described in current guidance. Where prescriptions were given to patients there was a log to maintain security and provide an audit trail.

Radiography (X-rays)

The practice had suitable arrangements to ensure the safety of the X-ray equipment. They met current radiation regulations and had the required information in their radiation protection file.

The practice had four intraoral X-ray machines which shared a rectangular collimator to reduce the dose of radiation to patients. There was also one extra-oral X-ray machine to take X-rays of the entire jaw. The practice used digital X-rays.

We saw evidence that the dentists justified, graded and reported on the X-rays they took. The practice carried out X-ray audits every year following current guidance and legislation. The last radiography audit was dated August 2017.

Clinical staff completed continuous professional development in respect of dental radiography as required by the General Dental Council (GDC).

Are services effective?

(for example, treatment is effective)

Our findings

Monitoring and improving outcomes for patients

The practice kept detailed dental care records containing information about the patients' current dental needs, past treatment and medical histories. Clinical notes were held electronically with digital radiographs inserted into the records. The dentists assessed patients' treatment needs in line with recognised guidance. The dental care records identified the discussions and advice given to patients in relation to their dental health by the various dental care professionals at the practice.

We saw that the practice audited patients' dental care records to check that the dentists recorded the necessary information.

Health promotion & prevention

The practice believed in preventative care and supporting patients to ensure better oral health in accordance with the government document: 'Delivering better oral health: an evidence based toolkit for prevention'. We saw evidence this was being used in the practice and staff were committed to preventative oral health care.

The dentists told us they prescribed high concentration fluoride toothpaste if a patient's risk of tooth decay indicated this would help them. They used fluoride varnish for all children based on an assessment of the risk of tooth decay for each child.

The dentists told us they discussed smoking, alcohol consumption and diet with patients during appointments. We saw evidence of this in dental care records. The practice had a selection of dental products for sale and provided health promotion leaflets to help patients with their oral health. Free samples of toothpaste were also available in treatment rooms and at reception.

Information posters and leaflets were available for patients to read in the waiting room. There was also a television to help giving information about treatments and positive oral health messages.

Staffing

The practice had three dentists; one implantologist; three dental therapists; five qualified dental nurses; two trainee

dental nurses; four receptionists and a practice manager. We checked the registrations of all dental care professionals with the General Dental Council (GDC) register. We found all staff were up to date with their professional registration with the GDC and had current indemnity insurance.

Staff new to the practice had a period of induction based on a structured induction programme. We confirmed clinical staff completed the continuous professional development (CPD) required for their registration with the General Dental Council. There were systems to monitor the staff training needed to meet CPD requirements.

We saw that staff appraisals had been completed annually.

Working with other services

Dentists confirmed they referred patients to a range of specialists in primary and secondary care if they needed treatment the practice did not provide. These included referring patients with suspected oral cancer under the national two week wait arrangements. This was initiated by the National Institute for Health and Care Excellence (NICE) in 2005 to help make sure patients were seen quickly by a specialist. The practice monitored urgent referrals to make sure they were dealt with promptly.

Consent to care and treatment

The practice team understood the importance of obtaining and recording patients' consent to treatment. There was a consent policy which referenced the Mental Capacity Act (MCA) 2005 and guidance relating to the treatment of young people aged under 16 years. We discussed consent with a dentist who showed a clear understanding and knowledge of the MCA and treating young people aged under 16. The dentists told us they gave patients information about treatment options and the risks and benefits of these so they could make informed decisions. Patients confirmed their dentist listened to them and gave them clear information about their treatment. We saw some examples where dentists had recorded this information in dental care records.

Patients were given a copy of their treatment plan and the practice recorded consent within the patient dental care records.

Are services caring?

Our findings

Respect, dignity, compassion and empathy

Staff we spoke with reception staff who were aware of their responsibility to respect people's diversity and human rights.

Patients commented positively that staff were professional, helpful and friendly. We saw that staff treated patients with respect, were polite and efficient at the reception desk and over the telephone.

Nervous patients said staff were compassionate and understanding.

Staff were aware of the importance of privacy and confidentiality. Staff told us that if a patient asked for more privacy they would take them into another room. The reception computer screens were not visible to patients and staff did not leave personal information where other patients might see it.

Staff password protected patients' electronic care records and backed these up to secure storage. Each staff member had their own unique password for the computer system.

Involvement in decisions about care and treatment

The practice offered both NHS dental treatments (50%) and private dental treatments (50%). The costs for both NHS and private dental treatment were displayed at reception and on the practice website.

The practice gave patients clear information to help them make informed choices about their treatment options. Patients confirmed that staff listened to them, did not feel rushed and were able to ask questions.

Patients told us staff were helpful and understanding when they were in pain, distress or discomfort.

The practice's website provided patients with information about the range of treatments available at the practice. These included general dentistry and treatments including dental implants, cosmetic dentistry and dentures provided by this practice.

Are services responsive to people's needs?

(for example, to feedback?)

Our findings

Responding to and meeting patients' needs

Patients described high levels of satisfaction with the responsive service provided by the practice.

The practice had an efficient appointment system to respond to patients' needs. Several patients commented on the ease of getting an appointment that suited their needs. Some patients commented positively about being seen at short notice when in pain or in an emergency. Staff told us that patients who requested an urgent appointment were seen the same day. Patients told us they had enough time during their appointment and did not feel rushed. Appointments ran smoothly on the day of the inspection and patients were not kept waiting. Each dentist made emergency appointment slots available each day or patients could come and sit and wait to be seen.

Staff told us that they texted patients who had signed up for the service 48 hours before an appointment was due. In addition staff telephoned patients 24 hours before their appointment if they had a longer appointment booked.

Promoting equality

The practice made reasonable adjustments for patients with disabilities. These included providing an induction hearing loop for patients who used a hearing aid. There were two treatment rooms situated on the ground floor and therefore accessible to patients who used wheelchairs and families with pushchairs. The toilet facilities were compliant with the requirements of Equality Act 2010. The practice had completed an access audit to formally assess how accessible the practice was to patients' needs.

The practice provided large print copies of medical history forms and the practice leaflet. Staff said there were arrangements for accessing an interpreter or translation service if and when required.

Access to the service

The practice displayed its opening hours on their website and outside the practice. This included the different options for access to emergency treatment outside of opening hours.

We confirmed the practice kept waiting times and cancellations to a minimum.

The practice was committed to seeing patients experiencing pain on the same day and kept appointments slots free for same day appointments. The answerphone provided telephone numbers for patients needing emergency dental treatment during the working day and when the practice was closed. This included access to the NHS 111 service. Patients confirmed they could make routine and emergency appointments easily and were rarely kept waiting for their appointment.

Concerns & complaints

The practice had a complaints policy providing guidance to staff on how to handle a complaint. The practice displayed a detailed procedure in the waiting room which explained how to make a complaint and identified other agencies patients could contact should they remain dissatisfied. The practice manager was responsible for dealing with complaints in the practice. Staff told us they would tell the practice manager about any formal or informal comments or concerns straight away so patients received a quick response.

Staff told us they aimed to settle complaints in-house and invited patients to speak with them in person to discuss these.

We looked at comments, compliments and complaints the practice received in the year up to this inspection. We saw historic records relating to complaints that had been received by the practice. Documentation showed the complaints had been handled in line with the practice policy. We saw that actions and learning points had been identified.

Are services well-led?

Our findings

Governance arrangements

The practice manager had responsibility for the management and leadership of the practice together with the day to day running of the service. Staff knew the management arrangements and their roles and responsibilities. The practice manager was also the registered manager.

The practice had policies, procedures and risk assessments to support the management of the service and to protect patients and staff. These included arrangements to monitor the quality of the service and make improvements. We saw that policies and risk assessments had been reviewed regularly throughout the calendar year.

The practice had information governance arrangements and staff were aware of the importance of these in protecting patients' personal information.

Leadership, openness and transparency

Staff were aware of the duty of candour requirements to be open, honest and to offer an apology to patients if anything went wrong. The practice had a policy for duty of candour. The policy served to remind staff of their responsibilities with regard to the duty of candour. Staff were prompted to offer an apology when things had gone wrong. Discussions with staff identified they understood the principles which underpinned the duty of candour. The practice manager gave an example of when the policy had been used in the practice.

Staff told us there was an open, no blame culture at the practice. They said they were encouraged them to raise any issues and felt confident they could do this. They knew who to raise any issues with and told us that managers within the organisation were approachable, would listen to their concerns and act appropriately. If staff had any concerns these were discussed at staff meetings and it was clear the practice worked as a team and dealt with issues professionally.

The practice held regular meetings where staff could raise any concerns and discuss clinical and non-clinical updates. Meetings were minuted and those minutes were available to all staff. Immediate discussions were arranged to share urgent information.

Learning and improvement

The practice had quality assurance processes to encourage learning and continuous improvement. These included audits of dental care records, infection control and radiography. We saw that audits had been evaluated and feedback provided to the relevant clinician or in staff meetings if relevant.

Staff showed a commitment to learning and improvement and valued the contributions made to the team by individual members of staff. The whole staff team had annual appraisals. They discussed learning needs, general wellbeing and aims for future professional development. We saw evidence of completed appraisals in the staff folders.

Staff told us they completed essential training, including medical emergencies and basic life support, each year. The General Dental Council requires clinical staff to complete continuous professional development (CPD) on a rolling cycle. The practice manager completed an audit tool to monitor staff compliance with their CPD requirements.

We saw evidence that staff were completing a range of training courses, and this was supported by the practice to ensure the development of staff skills.

Practice seeks and acts on feedback from its patients, the public and staff

The practice used a range of means including patient surveys and verbal comments to obtain staff and patients' views about the service. For example, the practice had removed its fish tank from the waiting room, but the fish tank was reinstalled. This was following comments from patients about how the fish had helped them relax, and had had a calming effect on them before their treatment.

Patients were encouraged to complete the NHS Friends and Family Test. There were comment cards and a response box in the waiting room to allow them to do this. Feedback from patients from the four months up to this inspection showed they were likely or extremely likely to recommend the practice to the friends and family.

There were four patient reviews recorded on Google reviews, although there were none recorded on the NHS Choices website. Comments were mostly positive.
