

Well Close Medical Group

Inspection report

Well Close Square
Berwick Upon Tweed
Northumberland
TD15 1LL
Tel: 01289333240
www.wellclosemedicalgroup.com

Date of inspection visit: 12 April 2018
Date of publication: 25/05/2018

This report describes our judgement of the quality of care at this service. It is based on a combination of what we found when we inspected, information from our ongoing monitoring of data about services and information given to us from the provider, patients, the public and other organisations.

Overall summary

This practice is rated as Good overall. (Previous inspection October 2014 – Good)

The key questions are rated as:

Are services safe? – Good

Are services effective? – Good

Are services caring? – Good

Are services responsive? – Good

Are services well-led? – Good

We carried out an announced comprehensive inspection at Well Close Medical Group on 12 April 2018 as part of our inspection programme.

At this inspection we found:

- The practice had systems to keep patients safe and safeguarded from abuse.
- The practice had clear systems to manage risk so that safety incidents were less likely to happen. When incidents did happen, the practice learned from them and improved their processes.
- The practice routinely reviewed the effectiveness and appropriateness of the care they provided. They ensured that care and treatment was delivered according to evidence-based guidelines.

- Staff involved and treated patients with compassion, kindness, dignity and respect.
- The practice organised and delivered services to meet patients' needs. They took account of patient needs and preferences.
- Patients were able to access care and treatment from the practice within an acceptable timescale for their needs.
- There was a focus on continuous learning and improvement at all levels of the organisation. The practice proactively used performance information to drive improvement.

The areas where the provider **should** make improvements is:

- Put in place a formal system to be able to demonstrate when patient safety alerts have been read and actioned by staff.
- Provide the appropriate level of childrens' safeguarding training for GPs.
- Take steps to ensure service users are treated with dignity and respect.

Professor Steve Field CBE FRCP FFPH FRCGP
Chief Inspector of General Practice

Population group ratings

Older people	Good 
People with long-term conditions	Good 
Families, children and young people	Good 
Working age people (including those recently retired and students)	Good 
People whose circumstances may make them vulnerable	Good 
People experiencing poor mental health (including people with dementia)	Good 

Our inspection team

Our inspection team was led by a CQC lead inspector. The team included a GP specialist advisor and a practice nurse specialist advisor.

Background to Well Close Medical Group

Well Close Medical Group provides care and treatment to around 9,100 patients in Berwick, North Northumberland. The practice is part of Northumberland clinical commissioning group (CCG) and operates on a Personal Medical Services (PMS) contract agreement for general practice.

The practice provides services from the following address, which we visited during this inspection:

- Well Close Square, Berwick Upon Tweed, Northumberland, TD15 1LL

The surgery is located in a purpose built two storey building. Patient facilities are on the ground and first floor. There is no lift to the first floor; however, there are consultation rooms on the ground floor which are suitable for patients with mobility problems. There is on-street parking, accessible parking, an accessible WC, wheelchair and step-free access.

Patients can book appointments in person, on-line or by telephone.

Opening hours are as follows:

- Monday and Wednesday 8am to 8pm
- Tuesday, Thursday and Friday 8am to 6.30pm
- Saturday 8am to 12pm

Appointments with GPs are available at the following times:

- Monday and Wednesday - 8.30am to 12.20pm; 1.30pm to 5.20pm; then from 6.30pm to 8pm.
- Tuesday, Thursday and Friday - 8.30am to 12.20pm; then from 1.30pm to 5.20pm
- Saturday – 8am to 12pm

The practice is part of a local hub which provides extended opening hours for patients; appointments are available Monday to Friday between 6.30pm and 8pm and on Saturday mornings between 8am and 12pm.

The service for patients requiring urgent medical attention out of hours is provided by the NHS 111 service and Vocare, which is also known locally as Northern Doctors Urgent Care.

The practice has:

- two GP partners (both male),
- a managing partner,
- five salaried GPs (three female and two male),
- two nurse practitioner and five practice nurses (all female),
- a healthcare assistant,
- a medicines manager,
- a phlebotomist, and

- 16 staff who carry out reception and administrative duties.

The practice is a training practice and one of the GPs is an accredited GP trainer. At the time of the inspection no trainee GPs were working at the practice.

The age profile of the practice population is in line with the local and national averages, but is made up of a

higher than average proportion of patients over the age 65 (26% compared to the national average of 17%). Information taken from Public Health England placed the area in which the practice is located in the fifth less deprived decile. In general, people living in more deprived areas tend to have greater need for health services.

Are services safe?

We rated the practice as good for providing safe services.

Safety systems and processes

The practice had systems to keep people safe and safeguarded from abuse.

- The practice had appropriate systems to safeguard children and vulnerable adults from abuse. The practice nurses and administrative staff had completed safeguarding training at a level relevant to their role. GPs had not recently completed level 3 safeguarding training. This is contrary to the Intercollegiate Guideline (ICG) “Safeguarding Children and Young People: roles and competences for health care staff” (2014), which sets out the minimum training requirements necessary. This framework states that clinical staff working with children, young people and/or their parents/carers and who could potentially contribute to assessing, planning, intervening and evaluating the needs of a child or young person and parenting capacity (this includes GPs) where there are safeguarding/child protection concerns should be trained to Level 3. However, the GPs we spoke with understood their role regarding safeguarding, could identify examples which may constitute concerns and knew who to report them to.
- Reports and learning from safeguarding incidents were available to staff. Staff who acted as chaperones were trained for their role and had received a DBS check. (DBS checks identify whether a person has a criminal record or is on an official list of people barred from working in roles where they may have contact with children or adults who may be vulnerable.)
- Staff took steps, including working with other agencies, to protect patients from abuse, neglect, harassment, discrimination and breaches of their dignity and respect.
- The practice carried out appropriate staff checks at the time of recruitment and on an ongoing basis.
- There was an effective system to manage infection prevention and control.
- The practice had arrangements to ensure that facilities and equipment were safe and in good working order.
- Arrangements for managing waste and clinical specimens kept people safe.

Risks to patients

There were adequate systems to assess, monitor and manage risks to patient safety.

- Arrangements were in place for planning and monitoring the number and mix of staff needed to meet patients’ needs, including planning for holidays, sickness, busy periods and epidemics.
- There was an effective induction system for temporary staff tailored to their role.
- The practice was equipped to deal with medical emergencies and staff were suitably trained in emergency procedures.
- Staff understood their responsibilities to manage emergencies on the premises and to recognise those in need of urgent medical attention. Clinicians knew how to identify and manage patients with severe infections including sepsis.
- When there were changes to services or staff the practice assessed and monitored the impact on safety.

Information to deliver safe care and treatment

Staff had the information they needed to deliver safe care and treatment to patients.

- The care records we saw showed that information needed to deliver safe care and treatment was available to staff. There was a documented approach to managing test results.
- The practice had systems for sharing information with staff and other agencies to enable them to deliver safe care and treatment.
- Clinicians made timely referrals in line with protocols.

Appropriate and safe use of medicines

The practice had reliable systems for appropriate and safe handling of medicines.

- The systems for managing and storing medicines, including vaccines, medical gases, emergency medicines and equipment, minimised risks.
- Staff prescribed, administered or supplied medicines to patients and gave advice on medicines in line with current national guidance. The practice had reviewed antibiotic prescribing and taken action to support good antimicrobial stewardship in line with local and national guidance.
- Patients’ health was monitored in relation to the use of medicines and followed up on appropriately. Patients were involved in regular reviews of their medicines.

Are services safe?

Track record on safety

The practice had a good track record on safety.

- There were comprehensive risk assessments in relation to safety issues.
- Activity was monitored and reviewed. This helped the practice to understand risks and gave a clear, accurate and current picture that led to safety improvements.

Lessons learned and improvements made

The practice learned and made improvements when things went wrong.

- Staff understood their duty to raise concerns and report incidents and near misses. Leaders and managers supported them when they did so.

- There were adequate systems for reviewing and investigating when things went wrong. The practice learned and shared lessons, identified themes and took action to improve safety in the practice.
- The practice acted on and learned from external safety events as well as patient and medicine safety alerts. The medicines manager took action on receipt of safety alerts and they were discussed at the clinical governance meetings, however there was no formalised system or log maintained to ensure that all relevant alerts had been acted on.

Please refer to the Evidence Tables for further information.

Are services effective?

We rated the practice and all of the population groups as good for providing effective services overall .

(Please note: Any Quality Outcomes (QOF) data relates to 2016/17. QOF is a system intended to improve the quality of general practice and reward good practice.)

Effective needs assessment, care and treatment

The practice had systems to keep clinicians up to date with current evidence-based practice. We saw that clinicians assessed needs and delivered care and treatment in line with current legislation, standards and guidance supported by clear clinical pathways and protocols.

- Patients' immediate and ongoing needs were fully assessed. This included their clinical needs and their mental and physical wellbeing.
- We saw no evidence of discrimination when making care and treatment decisions.
- Staff advised patients what to do if their condition got worse and where to seek further help and support.

Older people:

- Older patients who were frail or may have been vulnerable received a full assessment of their physical, mental and social needs. The practice used an appropriate tool to identify patients aged 65 and over who were living with moderate or severe frailty. Those identified as being frail had a clinical review including a review of medication.
- A named GP was assigned to each of the care homes where patients lived; this ensured continuity of care for those patients.
- The practice followed up on older patients discharged from hospital and ensured that their care plans and prescriptions were updated to reflect any extra or changed needs.
- Staff had appropriate knowledge of treating older people including their psychological, mental and communication needs.

People with long-term conditions:

- Patients with long-term conditions had a structured annual review to check their health and medicines needs were being met. For patients with the most complex needs, the GP worked with other health and care professionals to deliver a coordinated package of care.

- Staff who were responsible for reviews of patients with long term conditions had received specific training.
- The practice had arrangements for adults with newly diagnosed cardiovascular disease including the offer of high-intensity statins for secondary prevention. People with suspected hypertension were offered ambulatory blood pressure monitoring and patients with atrial fibrillation were assessed for stroke risk and treated as appropriate.
- The practice was able to demonstrate how they identified patients with commonly undiagnosed conditions, for example diabetes, atrial fibrillation and hypertension).
- The practice's QOF score for one of the chronic obstructive pulmonary disease (COPD) targets was below average; the percentage of patients who had a review undertaken was 79%, compared to the national average of 90%. Staff told us they had taken action to increase the rate during 2017/2018; the practice's own, unverified data, showed that 98.6% of patients had had a review during the previous year.

Families, children and young people:

- Childhood immunisations were carried out in line with the national childhood vaccination programme. Uptake rates for the vaccines given were above the target percentage of 90%
- The practice had arrangements to identify and review the treatment of newly pregnant women on long-term medicines. These patients were provided with advice and post-natal support in accordance with best practice guidance.
- The practice had arrangements for following up failed attendance of children's appointments following an appointment in secondary care or for immunisation.

Working age people (including those recently retired and students):

- The practice's uptake for cervical screening was 75%, which was above the national average of 72% but below the 80% coverage target for the national screening programme. Arrangements were in place to encourage patients to attend. One of the nurses in the practice had designed a 'pink letter' system; the third reminder letter was sent out on pink paper to try to encourage patients to have a screening test. This process was shared with other local practices; many of which adopted the system.

Are services effective?

- The practices' uptake for breast and bowel cancer screening was in line the national average.
- The practice had systems to inform eligible patients to have the meningitis vaccine, for example before attending university for the first time.
- Patients had access to appropriate health assessments and checks including NHS checks for patients aged 40-74. There was appropriate follow-up on the outcome of health assessments and checks where abnormalities or risk factors were identified.

People whose circumstances make them vulnerable:

- End of life care was delivered in a coordinated way which took into account the needs of those whose circumstances may make them vulnerable.
- The practice held a register of patients living in vulnerable circumstances including homeless people, travellers and those with a learning disability.
- The practice had a system for vaccinating patients with an underlying medical condition according to the recommended schedule.

People experiencing poor mental health (including people with dementia):

- The practice assessed and monitored the physical health of people with mental illness, severe mental illness, and personality disorder by providing access to health checks, interventions for physical activity, obesity, diabetes, heart disease, cancer and access to 'stop smoking' services. There was a system for following up patients who failed to attend for administration of long term medication.
- 91% of patients diagnosed with dementia had their care reviewed in a face to face meeting in the previous 12 months. This was above the national average of 84%.
- 100% of patients diagnosed with schizophrenia, bipolar affective disorder and other psychoses had a comprehensive, agreed care plan documented in the previous 12 months. This was above the national average of 90%.
- The practice specifically considered the physical health needs of patients with poor mental health and those living with dementia. For example, 94% of patients experiencing poor mental health had received advice about alcohol consumption, compared to the national average of 91%.

- Patients at risk of dementia were identified and offered an assessment to detect possible signs of dementia. When dementia was suspected there was an appropriate referral for diagnosis.
- The practice offered annual health checks to patients with a learning disability.

Monitoring care and treatment

The practice had a programme of quality improvement activity.

- The most recent published QOF results showed the practice's overall exception reporting rate was 13.1% compared with a national average of 9.6%. We saw an ongoing review was being carried out to understand the reasons for the higher rates.
- The practice used information about care and treatment to make improvements.
- The practice was actively involved in quality improvement activity. Where appropriate, clinicians took part in local and national improvement initiatives.

Effective staffing

Staff had the skills, knowledge and experience to carry out their roles.

- Staff had appropriate knowledge for their role, for example, to carry out reviews for people with long term conditions, older people and people requiring contraceptive reviews.
- Staff whose role included immunisation and taking samples for the cervical screening programme had received specific training and could demonstrate how they stayed up to date.
- The practice understood the learning needs of staff and provided protected time and training to meet them. Up to date records of skills, qualifications and training were maintained. Staff were encouraged and given opportunities to develop. However, GPs had not completed the recommended level of training in childrens' safeguarding.
- The practice provided staff with ongoing support. This included an induction process, one-to-one meetings, appraisals, coaching and mentoring, clinical supervision and support for revalidation.
- There was a clear approach for supporting and managing staff when their performance was poor or variable.

Are services effective?

Coordinating care and treatment

Staff worked together and with other health and social care professionals to deliver effective care and treatment.

- We saw records that showed that all appropriate staff, including those in different teams and organisations, were involved in assessing, planning and delivering care and treatment.
- The practice shared clear and accurate information with relevant professionals when deciding care delivery for people with long term conditions and when coordinating healthcare for care home residents. The shared information with, and liaised, with community services, social services and carers for housebound patients and with health visitors and community services for children who had relocated into the local area.
- Daily multi-disciplinary team meetings were held and attended by GPs, practice nurses and community nurses to discuss ongoing and new cases.
- Patients received coordinated and person-centred care. This included when they moved between services, when they were referred, or after they were discharged from hospital. The practice worked with patients to develop personal care plans that were shared with relevant agencies.
- The practice ensured that end of life care was delivered in a coordinated way which took into account the needs of different patients, including those who may be vulnerable because of their circumstances.

Helping patients to live healthier lives

Staff were consistent and proactive in helping patients to live healthier lives.

- The practice identified patients who may be in need of extra support and directed them to relevant services. This included patients in the last 12 months of their lives, patients at risk of developing a long-term condition and carers.
- Staff encouraged and supported patients to be involved in monitoring and managing their own health, for example through social prescribing schemes.
- Staff discussed changes to care or treatment with patients and their carers as necessary.
- The practice supported national priorities and initiatives to improve the population's health, for example, stop smoking and tackling obesity campaigns.

Consent to care and treatment

The practice obtained consent to care and treatment in line with legislation and guidance.

- Clinicians understood the requirements of legislation and guidance when considering consent and decision making.
- Clinicians supported patients to make decisions. Where appropriate, they assessed and recorded a patient's mental capacity to make a decision.

Please refer to the Evidence Tables for further information.

Are services caring?

We rated the practice as good for caring.

Kindness, respect and compassion

Staff treated patients with kindness, respect and compassion.

- Feedback from patients was positive about the way staff treat people.
- Staff understood patients' personal, cultural, social and religious needs.
- The practice gave patients timely support and information.

Involvement in decisions about care and treatment

Staff helped patients to be involved in decisions about care and treatment. They were aware of the Accessible Information Standard (a requirement to make sure that patients and their carers can access and understand the information that they are given.)

- Staff communicated with people in a way that they could understand, for example, communication aids and easy read materials were available.

- Staff helped patients and their carers find further information and access community and advocacy services. They helped them ask questions about their care and treatment.
- The practice employed a carers champion; proactively identified carers and supported them.

Privacy and dignity

The practice did not always respect patients' privacy and dignity.

- Reception staff knew that if patients wanted to discuss sensitive issues or appeared distressed they could offer them a private room to discuss their needs.
- The majority of staff recognised the importance of people's dignity and respect. Managers challenged behaviour that fell short of this.
- However, during the inspection we observed a clinician verbally giving out a patient's test results in the reception area, where other patients could overhear. We raised this with the partners and they assured us they would investigate and put plans in place to ensure it did not happen again.

Please refer to the Evidence Tables for further information.

Are services responsive to people's needs?

We rated the practice, and all of the population groups, as good for providing responsive services .

Responding to and meeting people's needs

The practice organised and delivered services to meet patients' needs. Patient needs and preferences were taken into account.

- The practice understood the needs of its population and tailored services in response to those needs.
- Telephone consultations were available which supported patients who were unable to attend the practice during normal working hours.
- The facilities and premises were appropriate for the services delivered.
- The practice made reasonable adjustments when patients found it hard to access services.
- The practice provided effective care coordination for patients who were more vulnerable or who had complex needs. They supported them to access services both within and outside the practice.
- Care and treatment for patients with multiple long-term conditions and patients approaching the end of life was coordinated with other services.
- The practice employed a Polish speaking GP and receptionist; they were able to provide translation services for patients. The GP translated some information leaflets into Polish to promote screening checks.

Older people:

- All patients had a named GP who supported them in whatever setting they lived, whether it was at home or in a care home or supported living scheme.
- The practice was responsive to the needs of older patients, and offered home visits and urgent appointments for those with enhanced needs.
- The GP and practice nurse also accommodated home visits for those who had difficulties getting to the practice.
- The practice was dementia friendly and had arranged for a national charity to provide training for some staff, which was then cascaded throughout the practice.

People with long-term conditions:

- Patients with a long-term condition received an annual review to check their health and medicines needs were being appropriately met. Multiple conditions were reviewed at one appointment, and consultation times were flexible to meet each patient's specific needs.
- The practice held regular meetings with the local district nursing team to discuss and manage the needs of patients with complex medical issues.

Families, children and young people:

- We found there were systems to identify and follow up children living in disadvantaged circumstances and who were at risk, for example, children and young people who had a high number of accident and emergency (A&E) attendances. Records we looked at confirmed this.
- All parents or guardians calling with concerns about a child were offered a same day appointment when necessary.
- Nursing staff wore child friendly tabards when carrying out childhood immunisations; which also informed other staff that they were not to be interrupted.

Working age people (including those recently retired and students):

- The needs of this population group had been identified and the practice had adjusted the services it offered to ensure these were accessible, flexible and offered continuity of care. For example, extended opening hours and Saturday appointments.
- Nurse appointments, including for cervical screening were also available during the evenings.

People whose circumstances make them vulnerable:

- The practice held a register of patients living in vulnerable circumstances including homeless people, travellers and those with a learning disability.
- People in vulnerable circumstances were easily able to register with the practice, including those with no fixed abode.
- The practice was in the process of setting up a 'Knit and Natter' group; to support patients who may have been socially isolated.

People experiencing poor mental health (including people with dementia):

- Staff interviewed had a good understanding of how to support patients with mental health needs and those patients living with dementia.

Are services responsive to people's needs?

- Information was available for patients experiencing poor mental health about how they could access various support groups and voluntary organisations.

Timely access to care and treatment

Patients were able to access care and treatment from the practice within an acceptable timescale for their needs.

- Patients had timely access to initial assessment, test results, diagnosis and treatment.
- Waiting times, delays and cancellations were minimal and managed appropriately.
- Patients with the most urgent needs had their care and treatment prioritised.
- Most patients reported that the appointment system was easy to use.

Listening and learning from concerns and complaints

The practice took complaints and concerns seriously and responded to them appropriately to improve the quality of care.

- Information about how to make a complaint or raise concerns was available. Staff treated patients who made complaints compassionately.
- The complaints policy and procedures were in line with recognised guidance. The practice learned lessons from individual concerns and complaints and also from analysis of trends. They acted as a result to improve the quality of care. For example, clinics used to be held in a branch surgery in Tweedmouth, following a review of concerns raised by patients services were moved back to the main surgery in Berwick.

Please refer to the Evidence Tables for further information.

Are services well-led?

We rated the practice and all of the population groups as good for providing a well-led service.

Leadership capacity and capability

Leaders had the capacity and skills to deliver high-quality, sustainable care.

- Leaders were knowledgeable about issues and priorities relating to the quality and future of services. They understood the challenges and were addressing them.
- Leaders at all levels were visible and approachable. They worked closely with staff and others to make sure they prioritised compassionate and inclusive leadership.
- The practice had effective processes to develop leadership capacity and skills, including planning for the future leadership of the practice.

Vision and strategy

The practice had a clear vision and credible strategy to deliver high quality, sustainable care.

- There was a clear vision and set of values. The practice had a realistic strategy and supporting business plans to achieve priorities. The practice developed its vision, values and strategy jointly with patients, staff and external partners.
- Staff were aware of and understood the vision, values and strategy and their role in achieving them.
- The strategy was in line with health and social priorities across the region. The practice planned its services to meet the needs of the practice population.
- The practice monitored progress against delivery of the strategy.

Culture

The practice had a culture of high-quality sustainable care.

- Staff stated they felt respected, supported and valued.
- The practice focused on the needs of patients.
- Leaders and managers acted on behaviour and performance inconsistent with the vision and values.
- Openness, honesty and transparency were demonstrated when responding to incidents and complaints. The provider was aware of and had systems to ensure compliance with the requirements of the duty of candour.
- Staff we spoke with told us they were able to raise concerns and were encouraged to do so. They had confidence that these would be addressed.

- There were processes for providing all staff with the development they need. This included appraisal and career development conversations. All staff received regular annual appraisals. Staff were supported to meet the requirements of professional revalidation where necessary.
- Clinical staff were given protected time for professional development and evaluation of their clinical work.
- There was a strong emphasis on the safety and well-being of all staff.
- The practice actively promoted equality and diversity. Staff had received equality and diversity training.
- There were positive relationships between staff and teams.

Governance arrangements

There were clear responsibilities, roles and systems of accountability to support good governance and management.

- Structures, processes and systems to support good governance and management were clearly set out, understood and effective. The governance and management of partnerships, joint working arrangements and shared services promoted interactive and co-ordinated person-centred care.
- Staff were clear on their roles and accountabilities including in respect of safeguarding and infection prevention and control.
- Practice leaders had established proper policies, procedures and activities to ensure safety and assured themselves that they were operating as intended.

Managing risks, issues and performance

There were clear and effective processes for managing risks, issues and performance.

- There was a process to identify, understand, monitor and address current and future risks including risks to patient safety.
- The practice had processes to manage current and future performance.
- Practice leaders had oversight of national and local safety alerts, incidents, and complaints.
- Clinical audit had a positive impact on quality of care and outcomes for patients. There was clear evidence of action to change practice to improve quality.
- The practice had plans in place and had trained staff for major incidents.

Are services well-led?

- The practice implemented service developments and where efficiency changes were made this was with input from clinicians to understand their impact on the quality of care.

Appropriate and accurate information

The practice acted on appropriate and accurate information.

- Quality and operational information was used to ensure and improve performance. Performance information was combined with the views of patients.
- Quality and sustainability were discussed in relevant meetings where all staff had sufficient access to information.
- The information used to monitor performance and the delivery of quality care was accurate and useful.
- The practice used information technology systems to monitor and improve the quality of care.
- The practice submitted data or notifications to external organisations as required.
- There were robust arrangements in line with data security standards for the availability, integrity and confidentiality of patient identifiable data, records and data management systems.

Engagement with patients, the public, staff and external partners

The practice involved patients, the public, staff and external partners to support high-quality sustainable services.

- A full and diverse range of patients', staff and external partners' views and concerns were encouraged, heard and acted on to shape services and culture. There was an active patient participation group.
- The service was transparent, collaborative and open with stakeholders about performance.

Continuous improvement and innovation

There were systems and processes for learning, continuous improvement and innovation.

- There was a focus on continuous learning and improvement.
- The practice made use of internal and external reviews of incidents and complaints. Learning was shared and used to make improvements.
- Leaders and managers encouraged staff to take time out to review individual and team objectives, processes and performance.

Please refer to the Evidence Tables for further information.
