# Stratford Village Dental Practice

## Inspection Report

42A Romford Road,  
London  
E15 4BZ  
Tel: 020 8519 6184  
Website: [www.stratford-dental.co.uk](http://www.stratford-dental.co.uk)

Date of inspection visit: 29 November 2018  
Date of publication: This is auto-populated when the  
report is published

## Overall summary

We carried out this unannounced inspection on 29 November 2018 under Section 60 of the Health and Social Care Act 2008 as part of our regulatory functions. We planned the inspection to check whether the registered provider was meeting the legal requirements in the Health and Social Care Act 2008 and associated regulations. The inspection was led by a CQC inspector who was supported by a specialist dental adviser.

To get to the heart of patients' experiences of care and treatment, we always ask the following five questions:

- Is it safe?
- Is it effective?
- Is it caring?
- Is it responsive to people's needs?
- Is it well-led?

These questions form the framework for the areas we look at during the inspection.

### **Our findings were:**

#### **Are services safe?**

We found that this practice was providing safe care in accordance with the relevant regulations.

#### **Are services effective?**

We found that this practice was providing effective care in accordance with the relevant regulations.

#### **Are services caring?**

We found that this practice was providing caring services in accordance with the relevant regulations.

#### **Are services responsive?**

We found that this practice was providing responsive care in accordance with the relevant regulations.

#### **Are services well-led?**

We found that this practice was providing well-led care in accordance with the relevant regulations.

### **Background**

Stratford Village Dental Practice is in the London Borough of Newham and provides NHS and private treatment to adults and children.

# Summary of findings

There is access via a staircase, however there is no access for people who use wheelchairs and those with pushchairs. Pay and display parking spaces are available near the practice.

The dental team includes four dentists (two of which are principal dentists), two dental nurses, two trainee dental nurses, two dental hygienists, two receptionists and a practice manager. The practice has four treatment rooms.

The practice is owned by a partnership and as a condition of registration must have a person registered with the Care Quality Commission as the registered manager. Registered managers have legal responsibility for meeting the requirements in the Health and Social Care Act 2008 and associated regulations about how the practice is run. At the time of inspection there was no registered manager in post as required as a condition of registration. A registered manager is legally responsible for the delivery of services for which the practice is registered. The principal dentists assured us that they will begin the process for arranging this after the inspection.

On the day of inspection, we spoke with three patients.

During the inspection we spoke with three dentists, a dental nurse, a trainee dental nurse, a dental hygienist, two receptionists and the practice manager. We looked at practice policies and procedures and other records about how the service is managed.

The practice is open:

Monday, Wednesday, Thursday and Friday 9am-5pm

Tuesday 9am-6pm

## Our key findings were:

- The practice appeared clean and well maintained.
- The provider had infection control procedures which reflected published guidance.
- Staff knew how to deal with emergencies. Appropriate medicines and life-saving equipment were available.
- The practice had systems to help them manage risk to patients and staff.

- The provider had suitable safeguarding processes and staff knew their responsibilities for safeguarding vulnerable adults and children.
- The provider had thorough staff recruitment procedures.
- The clinical staff provided patients' care and treatment in line with current guidelines.
- Staff treated patients with dignity and respect and took care to protect their privacy and personal information.
- Staff were providing preventive care and supporting patients to ensure better oral health.
- The appointment system took account of patients' needs.
- The provider had effective leadership and culture of continuous improvement.
- Staff felt involved and supported and worked well as a team.
- The provider asked staff and patients for feedback about the services they provided.
- The provider dealt with complaints positively and efficiently.
- The provider had suitable information governance arrangements.

There were areas where the provider could make improvements. They should:

Review stocks of medicines, materials and equipment and the practice's system for identifying, disposing and replenishing of out-of-date stock.

Review the provider's registration conditions to ensure the regulated activities at Stratford Village Dental Practice are managed by an individual who is registered as a manager with the Care Quality Commission.

Review the practice's protocols to ensure audits of radiography are undertaken at regular intervals to improve the quality of the service. Practice should also ensure that, where appropriate, audits have documented learning points and the resulting improvements can be demonstrated.

# Summary of findings

## The five questions we ask about services and what we found

We always ask the following five questions of services.

### Are services safe?

We found that this practice was providing safe care in accordance with the relevant regulations.

The practice had systems and processes to provide safe care and treatment. They used learning from incidents and complaints to help them improve.

Staff received training in safeguarding people and knew how to recognise the signs of abuse and how to report concerns.

Staff were qualified for their roles and the practice completed essential recruitment checks.

Premises and equipment were clean and properly maintained. The practice followed national guidance for cleaning, sterilising and storing dental instruments.

The practice had suitable arrangements for dealing with medical and other emergencies.

No  
action  

### Are services effective?

We found that this practice was providing effective care in accordance with the relevant regulations.

The dentists assessed patients' needs and provided care and treatment in line with recognised guidance.

Patients described the treatment they received as professional and good. The dentists discussed treatment with patients so they could give informed consent and recorded this in their records.

The practice had clear arrangements when patients needed to be referred to other dental or health care professionals.

The provider supported staff to complete training relevant to their roles and had systems to help them monitor this.

The staff were involved in quality improvement initiatives such as good practice scheme as part of its approach in providing high quality care.

No  
action  

### Are services caring?

We found that this practice was providing caring services in accordance with the relevant regulations.

We received feedback about the practice from three people. Patients were positive about all aspects of the service the practice provided. They told us staff were caring and kind.

They said that they were given helpful explanations about dental treatment and said their dentist listened to them. Patients commented that they made them feel at ease, especially when they were anxious about visiting the dentist.

We saw that staff protected patients' privacy and were aware of the importance of confidentiality. Patients said staff treated them with dignity and respect.

No  
action  

### Are services responsive to people's needs?

We found that this practice was providing responsive care in accordance with the relevant regulations.

The practice's appointment system took account of patients' needs. Patients could get an appointment quickly if in pain.

No  
action  

# Summary of findings

Staff considered patients' different needs. This included providing facilities for patients with a disability and families with children. The practice had access to translation and interpreting services and had arrangements to help patients with hearing loss.

The practice took patients views seriously. They valued compliments from patients and responded to concerns and complaints quickly and constructively.

## **Are services well-led?**

We found that this practice was providing well-led care in accordance with the relevant regulations.

At the time of inspection there was no registered manager in post as required as a condition of registration. A registered manager is legally responsible for the management of services for which the practice is registered.

The practice had arrangements to ensure the smooth running of the service. These included systems for the practice team to discuss the quality and safety of the care and treatment provided. There was a clearly defined management structure and staff felt supported and appreciated.

The practice team kept complete patient dental care records which were, clearly written or typed and stored securely.

The provider monitored clinical and non-clinical areas of their work to help them improve and learn. This included asking for and listening to the views of patients and staff.

**No  
action**  

# Are services safe?

## Our findings

### **Safety systems and processes, including staff recruitment, equipment and premises and radiography (X-rays)**

The practice had clear systems to keep patients safe.

Staff knew their responsibilities if they had concerns about the safety of children, young people and adults who were vulnerable due to their circumstances. The practice had safeguarding policies and procedures to provide staff with information about identifying, reporting and dealing with suspected abuse. We saw evidence that staff received safeguarding training. Staff knew about the signs and symptoms of abuse and neglect and how to report concerns, including notification to the CQC.

The practice had a system to highlight vulnerable patients on records e.g. children with child protection plans, adults where there were safeguarding concerns, people with a learning disability or a mental health condition, or who require other support such as communication.

The practice had a whistleblowing policy. Staff felt confident they could raise concerns without fear of reprimand.

The dentists used dental dams in line with guidance from the British Endodontic Society when providing root canal treatment. In instances where the rubber dam was not used, such as for example refusal by the patient, and where other methods were used to protect the airway, this was documented in the dental care record and a risk assessment completed.

The provider had a business continuity plan describing how they would deal with events that could disrupt the normal running of the practice.

The practice had a recruitment policy and procedure to help them employ suitable staff and had checks in place for agency and locum staff. These reflected the relevant legislation. We looked at four staff recruitment records. These showed the practice followed their recruitment procedure.

We noted that clinical staff were qualified and registered with the General Dental Council (GDC) and had professional indemnity cover.

The practice ensured that facilities and equipment were safe and that equipment was maintained according to manufacturers' instructions, including electrical and gas appliances.

Records showed that fire detection equipment, such as smoke detectors and emergency lighting, were regularly tested and firefighting equipment, such as fire extinguishers, were regularly serviced.

The practice had suitable arrangements to ensure the safety of the X-ray equipment and had the required information in their radiation protection file.

We saw evidence that the dentists justified, graded and reported on the radiographs they took. The practice had carried out radiography audits in the past and were in the process of ensuring these were done annually in line with current guidance and legislation.

Clinical staff completed continuing professional development (CPD) in respect of dental radiography.

### **Risks to patients**

There were systems to assess, monitor and manage risks to patient safety.

The practice's health and safety policies, procedures and risk assessments were reviewed regularly to help manage potential risk. The practice had current employer's liability insurance.

We looked at the practice's arrangements for safe dental care and treatment. The staff followed relevant safety regulation when using needles and other sharp dental items. A sharps risk assessment had been undertaken and was updated annually.

The provider had a system in place to ensure clinical staff had received appropriate vaccinations, including the vaccination to protect them against the Hepatitis B virus, and that the effectiveness of the vaccination was checked.

Staff knew how to respond to a medical emergency and completed training in emergency resuscitation and basic life support (BLS) every year.

Emergency equipment and medicines were available as described in recognised guidance. Staff kept records of their checks of these to make sure these were available, within their expiry date, and in working order.

# Are services safe?

A dental nurse worked with the dentists when they treated patients in line with GDC Standards for the Dental Team. A risk assessment was being put in place for when the dental hygienist worked without chairside support. We saw a copy of this after the inspection.

The provider had suitable risk assessments to minimise the risk that can be caused from substances that are hazardous to health.

The practice had an infection prevention and control policy and procedures. They followed guidance in The Health Technical Memorandum 01-05: Decontamination in primary care dental practices (HTM 01-05) published by the Department of Health and Social Care. Staff completed infection prevention and control training and received updates as required.

The practice had suitable arrangements for transporting, cleaning, checking, sterilising and storing instruments in line with HTM 01-05. The records showed equipment used by staff for cleaning and sterilising instruments was validated, maintained and used in line with the manufacturers' guidance.

The practice had systems in place to ensure that any work was disinfected prior to being sent to a dental laboratory and before treatment was completed.

The practice had procedures to reduce the possibility of Legionella or other bacteria developing in the water systems, in line with a risk assessment. All recommendations had been actioned and records of water testing and dental unit water line management were in place.

We saw cleaning schedules for the premises. The practice was visibly clean when we inspected.

The provider had policies and procedures in place to ensure clinical waste was segregated and stored appropriately in line with guidance.

The practice carried out infection prevention and control audits twice a year. The latest audit showed the practice was meeting the required standards.

## **Information to deliver safe care and treatment**

Staff had the information they needed to deliver safe care and treatment to patients.

We discussed with the dentist how information to deliver safe care and treatment was handled and recorded. We looked at a sample of dental care records to confirm our findings and noted that individual records were written and managed in a way that kept patients safe. Dental care records we saw were complete, legible, were kept securely and complied with General Data Protection Regulation (GDPR) requirements.

Patient referrals to other service providers contained specific information which allowed appropriate and timely referrals in line with practice protocols and current guidance.

## **Safe and appropriate use of medicines**

The provider had reliable systems for appropriate and safe handling of medicines.

The practice did not have a suitable stock control system for dental materials which were held on site. Some materials including composites had passed their expiry date and were kept alongside materials that were in date, making it difficult to know what had been used. The principal dentists gave us assurances that all expired materials would be disposed of safely and a thorough review of stock control measures would be carried out immediately.

The practice stored and kept records of NHS prescriptions as described in current guidance.

The dentists were aware of current guidance with regards to prescribing medicines.

## **Track record on safety and Lessons learned and improvements**

There were comprehensive risk assessments in relation to safety issues. The practice monitored and reviewed incidents. This helped it to understand risks and gave a clear, accurate and current picture that led to safety improvements.

In the previous 12 months there had been no safety incidents.

There were adequate systems for reviewing and investigating when things went wrong. The practice learned and shared lessons identified themes and acted to improve safety in the practice.

# Are services safe?

There was a system for receiving and acting on safety alerts. The practice learned from external safety events as well as patient and medicine safety alerts. We saw they were shared with the team and acted upon if required.

# Are services effective?

(for example, treatment is effective)

## Our findings

### Effective needs assessment, care and treatment

The practice had systems to keep dental practitioners up to date with current evidence-based practice. We saw that clinicians assessed patients' needs and delivered care and treatment in line with current legislation, standards and guidance supported by clear clinical pathways and protocols.

The practice had access to intra-oral cameras to enhance the delivery of care.

The practice were members of a 'good practice' certification scheme.

### Helping patients to live healthier lives

The practice was providing preventive care and supporting patients to ensure better oral health in line with the Delivering Better Oral Health toolkit.

The dentists prescribed high concentration fluoride toothpaste if a patient's risk of tooth decay indicated this would help them. They used fluoride varnish for children and adults based on an assessment of the risk of tooth decay.

The dentists/clinicians where applicable, discussed smoking, alcohol consumption and diet with patients during appointments. The practice had a selection of dental products for sale and provided health promotion leaflets to help patients with their oral health.

The practice was aware of national oral health campaigns and local schemes in supporting patients to live healthier lives. For example, local stop smoking services. They directed patients to these schemes when necessary.

The dentist and dental hygienist described to us the procedures they used to improve the outcomes for patients with gum disease. This involved providing patients preventative advice, taking plaque and gum bleeding scores and recording detailed charts of the patient's gum condition

Patients with more severe gum disease were recalled at more frequent intervals for review and to reinforce home care preventative advice.

The practice obtained consent to care and treatment in line with legislation and guidance.

The practice team understood the importance of obtaining and recording patients' consent to treatment. The dentists gave patients information about treatment options and the risks and benefits of these so they could make informed decisions. Patients confirmed their dentist listened to them and gave them clear information about their treatment.

The practice's consent policy included information about the Mental Capacity Act 2005. The team understood their responsibilities under the act when treating adults who may not be able to make informed decisions. The policy also referred to Gillick competence, by which a child under the age of 16 years of age may give consent for themselves. The staff were aware of the need to consider this when treating young people under 16 years of age.

Staff described how they involved patients' relatives or carers when appropriate and made sure they had enough time to explain treatment options clearly.

### Monitoring care and treatment

The practice kept detailed dental care records containing information about the patients' current dental needs, past treatment and medical histories. The dentists assessed patients' treatment needs in line with recognised guidance.

We saw the practice audited patients' dental care records to check that the dentists/clinicians recorded the necessary information.

### Effective staffing

Staff had the skills, knowledge and experience to carry out their roles.

Staff new to the practice had a period of induction based on a structured programme. We confirmed clinical staff completed the continuing professional development required for their registration with the General Dental Council.

Staff discussed their training needs at annual appraisals. We saw evidence of completed appraisals and how the practice addressed the training requirements of staff.

### Co-ordinating care and treatment

Staff worked together and with other health and social care professionals to deliver effective care and treatment.

The dentists confirmed they referred patients to a range of specialists in primary and secondary care if they needed treatment the practice did not provide.

# Are services effective?

(for example, treatment is effective)

The practice had systems to identify, manage, follow up and where required refer patients for specialist care when presenting with dental infections.

The practice also had systems for referring patients with suspected oral cancer under the national two week wait arrangements. This was initiated by NICE in 2005 to help make sure patients were seen quickly by a specialist.

The practice monitored all referrals to make sure they were dealt with promptly.

The practice monitored and ensured that the dentists were aware of all incoming referrals daily.

# Are services caring?

## Our findings

### **Kindness, respect and compassion**

Staff treated patients with kindness, respect and compassion.

Staff were aware of their responsibility to respect people's diversity and human rights.

Patients commented positively that staff were considerate and caring. We saw that staff treated patients respectfully, appropriately and kindly and were friendly towards patients at the reception desk and over the telephone.

Patients told us staff were helpful when they were in pain, distress or discomfort.

### **Privacy and dignity**

The practice respected and promoted patients' privacy and dignity.

Staff were aware of the importance of privacy and confidentiality. The layout of reception and waiting areas provided privacy when reception staff were dealing with patients. If a patient asked for more privacy, staff would take them into another room. The reception computer screens were not visible to patients and staff did not leave patients' personal information where other patients might see it.

Staff password protected patients' electronic care records and backed these up to secure storage. They stored paper records securely.

### **Involving people in decisions about care and treatment**

Staff helped patients to be involved in decisions about their care and were aware of the

Accessible Information Standards and the requirements under the Equality Act

(a requirement to make sure that patients and their carers can access and understand the information they are given):

- Interpretation services were available for patients who did not use English as a first language. We saw notices in the reception areas, written in languages other than English, informing patient's translation service were available. Patients were also told about multi-lingual staff that might be able to support them.
- Staff communicated with patients in a way that they could understand and communication aids and easy read materials were available.
- Staff helped patients and their carers find further information and access community and advocacy services. They helped them ask questions about their care and treatment.

The practice gave patients clear information to help them make informed choices about their treatment. Patients confirmed that staff listened to them, did not rush them and discussed options for treatment with them. A dentist described the conversations they had with patients to satisfy themselves they understood their treatment options.

The practice's website and information leaflet provided patients with information about the range of treatments available at the practice.

The dentists described to us the methods they used to help patients understand treatment options discussed. These included for example models, videos, X-ray images and an intra-oral camera. The intra-oral camera enabled images to be taken of the tooth being examined or treated and shown to the patient/relative to help them better understand the diagnosis and treatment.

# Are services responsive to people's needs?

(for example, to feedback?)

## Our findings

### Responding to and meeting people's needs

The practice organised and delivered services to meet patients' needs. It took account of patient needs and preferences.

Staff were clear on the importance of emotional support needed by patients when delivering care.

Patients described high levels of satisfaction with the responsive service provided by the practice.

The practice currently had some patients for whom they needed to make adjustments to enable them to receive treatment. The practice had made reasonable adjustments for patients with disabilities. These included a hearing loop for people with hearing impairment.

A disability access audit had been completed and an action plan formulated to continually improve access for patients.

### Timely access to services

Patients could access care and treatment from the practice within an acceptable timescale for their needs.

The practice displayed its opening hours in the premises, and included it in their information leaflet and on their website.

The practice had an appointment system to respond to patients' needs. Patients who requested an urgent appointment were seen the same day. Patients had enough time during their appointment and did not feel rushed. Appointments ran smoothly on the day of the inspection and patients were not kept waiting.

The practice's website, information leaflet and answerphone provided telephone numbers for patients needing emergency dental treatment during the working day and when the practice was not open. Patients confirmed they could make routine and emergency appointments easily and were rarely kept waiting for their appointment.

### Listening and learning from concerns and complaints

The practice took complaints and concerns seriously and responded to them appropriately to improve the quality of care.

The practice had a policy providing guidance to staff on how to handle a complaint. The practice information leaflet explained how to make a complaint.

The practice manager was responsible for dealing with these. Staff would tell the practice manager about any formal or informal comments or concerns straight away so patients received a quick response.

The practice manager aimed to settle complaints in-house and invited patients to speak with them in person to discuss these. Information was available about organisations patients could contact if not satisfied with the way the practice dealt with their concerns.

We looked at comments, compliments and complaints the practice received over the past 12 months.

These showed the practice responded to concerns appropriately and discussed outcomes with staff to share learning and improve the service.

# Are services well-led?

## Our findings

### Leadership capacity and capability

We found the partners had the capacity and skills to deliver high-quality, sustainable care.

They were knowledgeable about issues and priorities relating to the quality and future of services. They understood the challenges and were addressing them.

The partners and practice manager were visible and approachable. They worked closely with staff and others to make sure they prioritised compassionate and inclusive leadership.

#### Culture

The practice had a culture of high-quality sustainable care.

Staff stated they felt respected, supported and valued. They were proud to work in the practice.

The practice focused on the needs of patients.

Openness, honesty and transparency were demonstrated when responding to incidents and complaints. The provider was aware of and had systems to ensure compliance with the requirements of the Duty of Candour.

Staff could raise concerns and were encouraged to do so. They had confidence that these would be addressed.

### Governance and management

There were clear responsibilities, roles and systems of accountability to support good governance and management.

The partners had overall responsibility for the management and clinical leadership of the practice. The practice manager was responsible for the day to day running of the service. Staff knew the management arrangements and their roles and responsibilities.

The provider had a system of clinical governance in place which included policies, protocols and procedures that were accessible to all members of staff and were reviewed on a regular basis.

There were clear and effective processes for managing risks, issues and performance.

### Appropriate and accurate information

The practice acted on appropriate and accurate information.

Quality and operational information was used to ensure and improve performance. Performance information was combined with the views of patients.

The practice had information governance arrangements and staff were aware of the importance of these in protecting patients' personal information.

### Engagement with patients, the public, staff and external partners

The practice involved patients, the public, staff and external partners to support high-quality sustainable services.

The practice used patient surveys and a comment book to obtain staff and patients' views about the service.

Patients were encouraged to complete the NHS Friends and Family Test (FFT). This is a national programme to allow patients to provide feedback on NHS services they have used. Feedback was looked at and used as part of the quality assurance processes.

The practice gathered feedback from staff through meetings, surveys, and informal discussions. Staff were encouraged to offer suggestions for improvements to the service and said these were listened to and acted on.

### Continuous improvement and innovation

There were systems and processes for learning, continuous improvement and innovation.

The practice had quality assurance processes to encourage learning and continuous improvement. These included audits of dental care records and infection prevention and control. They were in the process of updating the radiology audit. They had clear records of the results of the audits undertaken and the resulting action plans and improvements.

The partners and the practice manager showed a commitment to learning and improvement and valued the contributions made to the team by individual members of staff.

The dental nurses had annual appraisals. They discussed learning needs, general wellbeing and aims for future professional development. We saw evidence of completed appraisals in the staff folders.

# Are services well-led?

Staff completed 'highly recommended' training as per General Dental Council professional standards. This included undertaking medical emergencies and basic life support training annually. The provider supported and encouraged staff to complete CPD.
